## PREFACE

The Colorado Geological Survey has long recognized the geological profession's and the public's need for an index to the extensive literature on the geology and mining of Colorado. In 1914, after more than 5 years of preparation, the first comprehensive bibliography, CGS Bulletin 7, was published. With the exception of a series of Colorado School of Mines quarterlies and circulars compiled in the 1920's by J. Harlan Johnson, no comprehensive supplement to the original volume has appeared. Since its reactivation in 1969, the CGS has maintained the philosophy of the earlier days and, through a specific legislative charge to "collect, preserve and distribute geologic information," has now issued the long-awaited new edition. Bulletin 37 contains more than 12,000 references to Colorado geological literature published between 1875 and January 1, 1975.

This bibliography was compiled by the American Geological Institute, utilizing its computer-based data collection system, GeoRef. Project manager for this contract (C.E. 151617, A/C 75-143, G/L 53231) was John G. Mulvihill. Jack Wolfire of Ron Henderson Associates made valuable contributions to the design and format of the final product. Credit for input and indexing goes to Selma Bonham, Roger Kussow, Gerald Ochs (formerly of AGI), Janina Bloch, Jane Ciener, Martha Fletcher, Paloma Hormess, Julia Jackson, and Cyril Leland (editors/indexers at AGI); for general help and retrieval, to Marcia Lakeman (GSA and AGI); and for considerable effort at copy-reading, to Lillian Dawson of GeoRef. Additional information was supplied by Dr. Ghassam N. Rassam, Chief Editor for GeoRef. The Colorado Geological Survey provided many of the source materials and intermediate review for this work.

Specific acknowledgment should be made of the important contributions of two geologists, Larry O'Brian and George Fentress. As Colorado legislators and long-time supporters of CGS, they helped to provide the funding for this project. Without their direct legislative effort, this publication would not have been possible.

The bibliographic materials in this document are now included in GeoRef's magnetic-tape file and are available through normal lease and purchase programs and through contracts for bibliographic search. Potential users of this computerized service, which should now be complete for Colorado, should contact the American Geological Institute.

Although considerable effort was made to insure accuracy and consistency throughout this volume, readers will inevitably note some citation errors and format inconsistencies. The Colorado Geological Survey assumes no responsibility for these errors but encourages readers to submit corrections, suggestions, and other comments so that these problems may be avoided in future supplements.

We hope that Bulletin 37 will not only serve as a valuable reference work for government, industry, and educational institutions, but also encourage Coloradoans to appreciate more the diverse geology and unique mineral wealth of their state.

## INFORMATION FOR USERS

This bibliography encompasses the well known fields of stratigraphy, structure and tectonics, mining and economic geology, petrology, mineralogy, historical geology, paleontology, geomorphology, geochemistry, hydrology, engineering and environmental geology, geophysics, and archaeology. The volume consists of 4 sections: 1) Bibliography, 2) Subject Index, 3) County Index, and 4) Rock-Unit Index. Citations are listed alphabetically by author and chronologically under each author. To facilitate locating and identifying certain materials, two or more references are made to the same article when it appears in different journals or books. In the case of theses, the works may have similar titles but substantially different contents.

No attempt was made to screen the contents as to scientific importance. Because the goal was to produce a comprehensive product, some articles, especially those dealing with resources, may be of a "news" rather than "scientific" significance. References such as Colorado Geological Survey, U.S. Geological Survey, U.S. Bureau of Mines, and other governmental agency open-file reports have not been included; nor have articles from most trade and industrial journals been referenced. The geographic coverage was principally that of Colorado and adjoining states (Arizona, Kansas, Nebraska, New Mexico, Oklahoma, Utah, and Wyoming). Some papers dealing with Colorado Plateau or Rocky Mountain geology were added, although these works may have contained no specific reference to locations within Colorado.

The overall format and indexing system follow that of the Geological Society of America's *Bibliography and Index of Geology* (B.I.G.), which is a derivative of the USGS *Bibliography of North American Geology* and the Geological Society of America's *Bibliography and Index of Geology Exclusive of North America*. Index terms or groups of terms appear in hierarchical form of two or three levels, with subject and geographic terms intermixed. The B.I.G. scheme of global geographic interest has been modified to meet the needs of regional and local interest. Thus, the terms "Colorado" and "United States" are largely eliminated, and the hierarchical structure is adjusted accordingly, frequently to only two levels. Consequently, the following conventions are used:

- 1) The term "Colorado" appears in index sets only with the name of another state or region. Otherwise, a direct reference is made a) by locality, b) by a geographic modifier, such as "southwest," or c) by the term "regional."
- 2) The term "regional" refers to papers that deal with the geology of the state as a whole or to papers in which the specific locality could not be ascertained.
- 3) Geographic modifiers such as "south," "northwest," or "central," refer to the state of Colorado only.
- 4) The terms "United States" and "North America" appear infrequently and only in reference to papers dealing with major regions such as "Western Interior" or with the entire area described by the term.

The fact that the references were, in most cases, not indexed directly from the original work make it impossible to determine the pertinent county or rock units for all papers. For practical reasons, papers that discuss the geology of more than 10 counties or rock units are not listed in the respective indexes. Instead, broad geographic and age terms appear in the Subject Index. For example, Johnstone, Ramarathnam, and Richards (1962), which deals with the soils of 30 eastern Colorado counties, does not appear under any of the corresponding county names in the County Index but is listed in the Subject Index under "Soils, *Engineering properties*, Analysis...east," under "Engineering geology, *Soil mechanics*, Analysis...east," and under "Maps, East, Soils, parent materials."

In the Subject Index, the citation information following the index terms consists of the author's name and publication date. In the County and Rock-Unit Indexes, author's name, date, and article title are listed.

Some examples will help illustrate the principles integrated into the indexing scheme of this bibliography. To find the citation for the paper entitled "Zone garnet from Crested Butte, Colorado," a reader might select an appropriate general term such as "Mineralogy" or "Minerals." "Minerals," the first-order term, appears in boldface and is followed by *Orthosilicates*, *garnet group*, the second-order term. On the following line appears the third-order term, "Andradite, grossular, zoning, spectroscopy, electron probe (Lessing, Peter 1973)." For the reader not familiar with scientific mineral class names, the first-order term "Mineralogy" might be chosen. Here, because no second-order terms are listed, he would scan the third-order terms until he saw "Garnet, Gunnison County, Crested Butte (Lessing, Peter 1973)." If the author is unknown, the reader cannot use the County Index unless he scans the entire Gunnison County list.

Suppose a reader wanted to locate references on Pennsylvanian corals. Possible first-order headings would include "Invertebrates," "Paleontology," and "Paleoecology." Looking at "Invertebrata," one would find three second-order terms--*Biostratigraphy*, *Faunal Studies*, *Paleoecology*. A quick check shows no pertinent reference under *Biostratigraphy*. Under *Faunal Studies* one would find the following key terms:

Carboniferous [includes Mississippian and Pennsylvanian]...occurrence, taxonomy, Coelenterata...  
(White, Charles A. 1879),

Pennsylvanian...biostratigraphy, paleoecology...  
(Ellis, C. Howard 1966),

Pennsylvanian...biostratigraphy, morphology, zoning,  
paleoecology...Coelenterata...(Tischler, Herbert 1963),

and

Pennsylvanian, McCoy Formation (Roth, R. 1930).

Under *Paleoecology* one would see

Distribution, diversity, Pennsylvania, McCoy  
(Stevens, Calvin H. 1971).

Because no second-order index terms appear under "Paleontology," the reader immediately scans the third-order headings and finds the following additional citations:

Coelenterata, Paleozoic (Sando, William J. 1965),

Faunal studies, Carboniferous... (Newberry, J. S.  
1876),

Faunal studies, Paleozoic, regional, (Chronic,  
Byron J., Jr. 1954),

Faunal studies, Pennsylvanian, Chaffee County...  
(Stough, Joan B. 1957),

Faunal studies, Pennsylvanian, regional (Chronic,  
Byron J., Jr. 1958).

Under "Paleoecology, *Pennsylvanian*," one would find

Colorado, Utah, marine (Elias, Gregory K. 1962)

and

Regional, marine, indicators, faunal studies  
(Stevens, Calvin H. 1969).

Obviously other papers may contain descriptions of Pennsylvanian corals, but, as stated earlier, for indexing purposes, such information cannot always be determined from an article's title.

As an aid in using the bibliography and indexes, the reader should familiarize himself with the list of serials and the following three maps, which show county names and locations, generalized geology, and major structural and tectonic features.

- Prowers County, sinkholes, fossil (Dane, Carle Hamilton 1934)
- Pueblo, foraminifera, paleoecology, stratigraphy, Carlile Shale (Eicher, Don L. 1966)
- Pueblo, lithostratigraphy, biostratigraphy, Mollusca, upper Cretaceous (Cobban, W. A. 1972)
- Pueblo, Mollusca, Niobrara Formation (Scott, Glenn R. 1962)
- Pueblo, stratigraphy, biostratigraphy, paleontology, faunal studies, lists, Niobrara Formation (Scott, Glenn R. 1964)
- Ragged-Chair Mountain, coal, Mancos Shale, Mesaverde Formation (Hanks, Ted L. 1962)
- Raton Basin, lithofacies, Dakota Group, Graneros Shale, Greenhorn Limestones, Carlile Shale, Fort Hays Limestone (Kauffman, Erle G. 1969)
- Raton Basin, sandstone, sedimentation, controls, Trinidad Sandstone (Matuszczak, R. A. 1969)
- Regional, amber, Laramie Formation (Cockerell, Theodore Dru Alison. 1909)
- Regional, angiosperms (Dana, J. D. 1876)
- Regional, angiosperms, Fox Hills Sandstone (Cockerell, Theodore Dru Alison. 1907)
- Regional, Archosauria, upper Cretaceous, Laramie Formation (Toepelman, Walter Carl. 1936)
- Regional, Arthropoda (Reeside, John Bernard, Jr. 1952)
- Regional, Aves, upper Cretaceous, Dakota Sandstone (Mehl, M. G. 1931)
- Regional, bentonite, Benton Formation (Ganow, Harold C. 1969)
- Regional, biostratigraphy, foraminifera, Coniacian, Niobrara Formation, Mancos Shale (Kent, Harry C. 1967)
- Regional, biostratigraphy, Plantae, Montana Formation (Knowlton, Frank Hall. 1900)
- Regional, biostratigraphy, Plantae, upper Cretaceous, Fox Hills Sandstone, Colgate Member (Brown, R. W. 1939)
- Regional, biostratigraphy, pteridophytes (Read, Charles B. 1961)
- Regional, Bivalvia (Reeside, John Bernard, Jr. 1930)
- Regional, boundary, upper Cretaceous (Imaizumi, Rikizo. [1968])
- Regional, Cephalopoda (Boss, Reuel Lee. 1928)
- Regional, Cephalopoda, upper Cretaceous (Reeside, John Bernard, Jr. 1932)
- Regional, clay mineralogy, Dakota Formation (Larsen, Veryl E. 1954)
- Regional, coal measures, upper Cretaceous (Hills, R. C. 1893)
- Regional, coal, palynomorphs (Ames, H. T. 1951)
- Regional, concretions, sedimentary rocks, upper Cretaceous, Fox Hills Sandstone (Mathias, Henry Edwin. 1931)
- Regional, contact, Fox Hills Formation, Lance Formation (Dobbin, C. E. 1929)
- Regional, Echinodermata (Clark, W. B. 1891)
- Regional, Echinodermata (Reeside, John Bernard, Jr. 1924)
- Regional, Echinodermata, Echinoidea, upper Cretaceous (Cooke, C. W. 1953)
- Regional, foraminifera, biostratigraphy, correlation, Pierre Shale (Kimball, Edgar W. 1932)
- Regional, foraminifera, biostratigraphy, Niobrara Formation (Bates, Clair E. 1949)
- Regional, foraminifera, Graneros Shale (Eicher, Don L. 1963)
- Regional, fossils, Fox Hills Formation (Waage, Karl M. 1960)
- Regional, Gastropoda, stratigraphy, upper Cretaceous, Carlile Shale, Codell Sandstone Member, Pugnellus Sandstone (Kauffman, Erle G. 1961)
- Regional, geochemistry, radium, ground water, surface water, lower Cretaceous, Purgatoire Formation (Scott, Robert C. 1963)
- Regional, geosynclines, stratigraphy (Harris, George W. 1939)
