

TYPICAL SECTION 6 LANE OR 4 LANE DIVIDED BITUMINOUS PAVEMENT TYPE AA AND A

- NOTES**
1. PAVEMENT THICKNESS DETERMINED BY PAVEMENT DESIGN; SEE CDOT PAVEMENT DESIGN MANUAL.
  2. ALL SECTIONS SHOWN ARE SUBJECT TO MODIFICATIONS DEPENDING ON REQUIREMENTS FOR EACH PROJECT.
  3. ALL THICKNESSES OF SUBBASE, BASE COURSE AND SURFACE COURSE ARE TO BE SHOWN ON PLANS AS APPROXIMATE.
  4. DETAILS OF SPEED CHANGE LANES WILL BE SHOWN ON PLANS.
  5. IF ADDITIONAL LANES WILL BE ADDED IN THE FUTURE IN THE MEDIAN AREA, FOR INITIAL MEDIAN WIDTHS OF 54 TO 80 FEET, THE TYPICAL SECTION SHALL PIVOT ABOUT THE MEDIAN  $\phi$  INSTEAD OF THE PROFILE GRADE.
  6. SEE TABLE 4-2 FOR FILL SLOPE STANDARDS.
  7. INCLUDE APPROPRIATE TYPICAL SECTION GENERAL NOTES.
  8. SEE FIGURE 4-3 FOR OTHER MEDIAN TREATMENTS.

NOTE: CUT SLOPE NOT STEEPER THAN 3:1 EXCEPT IN SPECIAL CASES.

**EDGE OF PAVEMENT DETAIL**

**DIMENSION TABLE**

SECTION TYPE	X	Y	Y'	Z
	FEET			
AA (TRUCK DHV > 250)	36	12	12	12
AA (TRUCK DHV ≤ 250)	36	10	10	12
A	24	10	4	12

**FORMULA FOR SUBGRADE Z SLOPE**

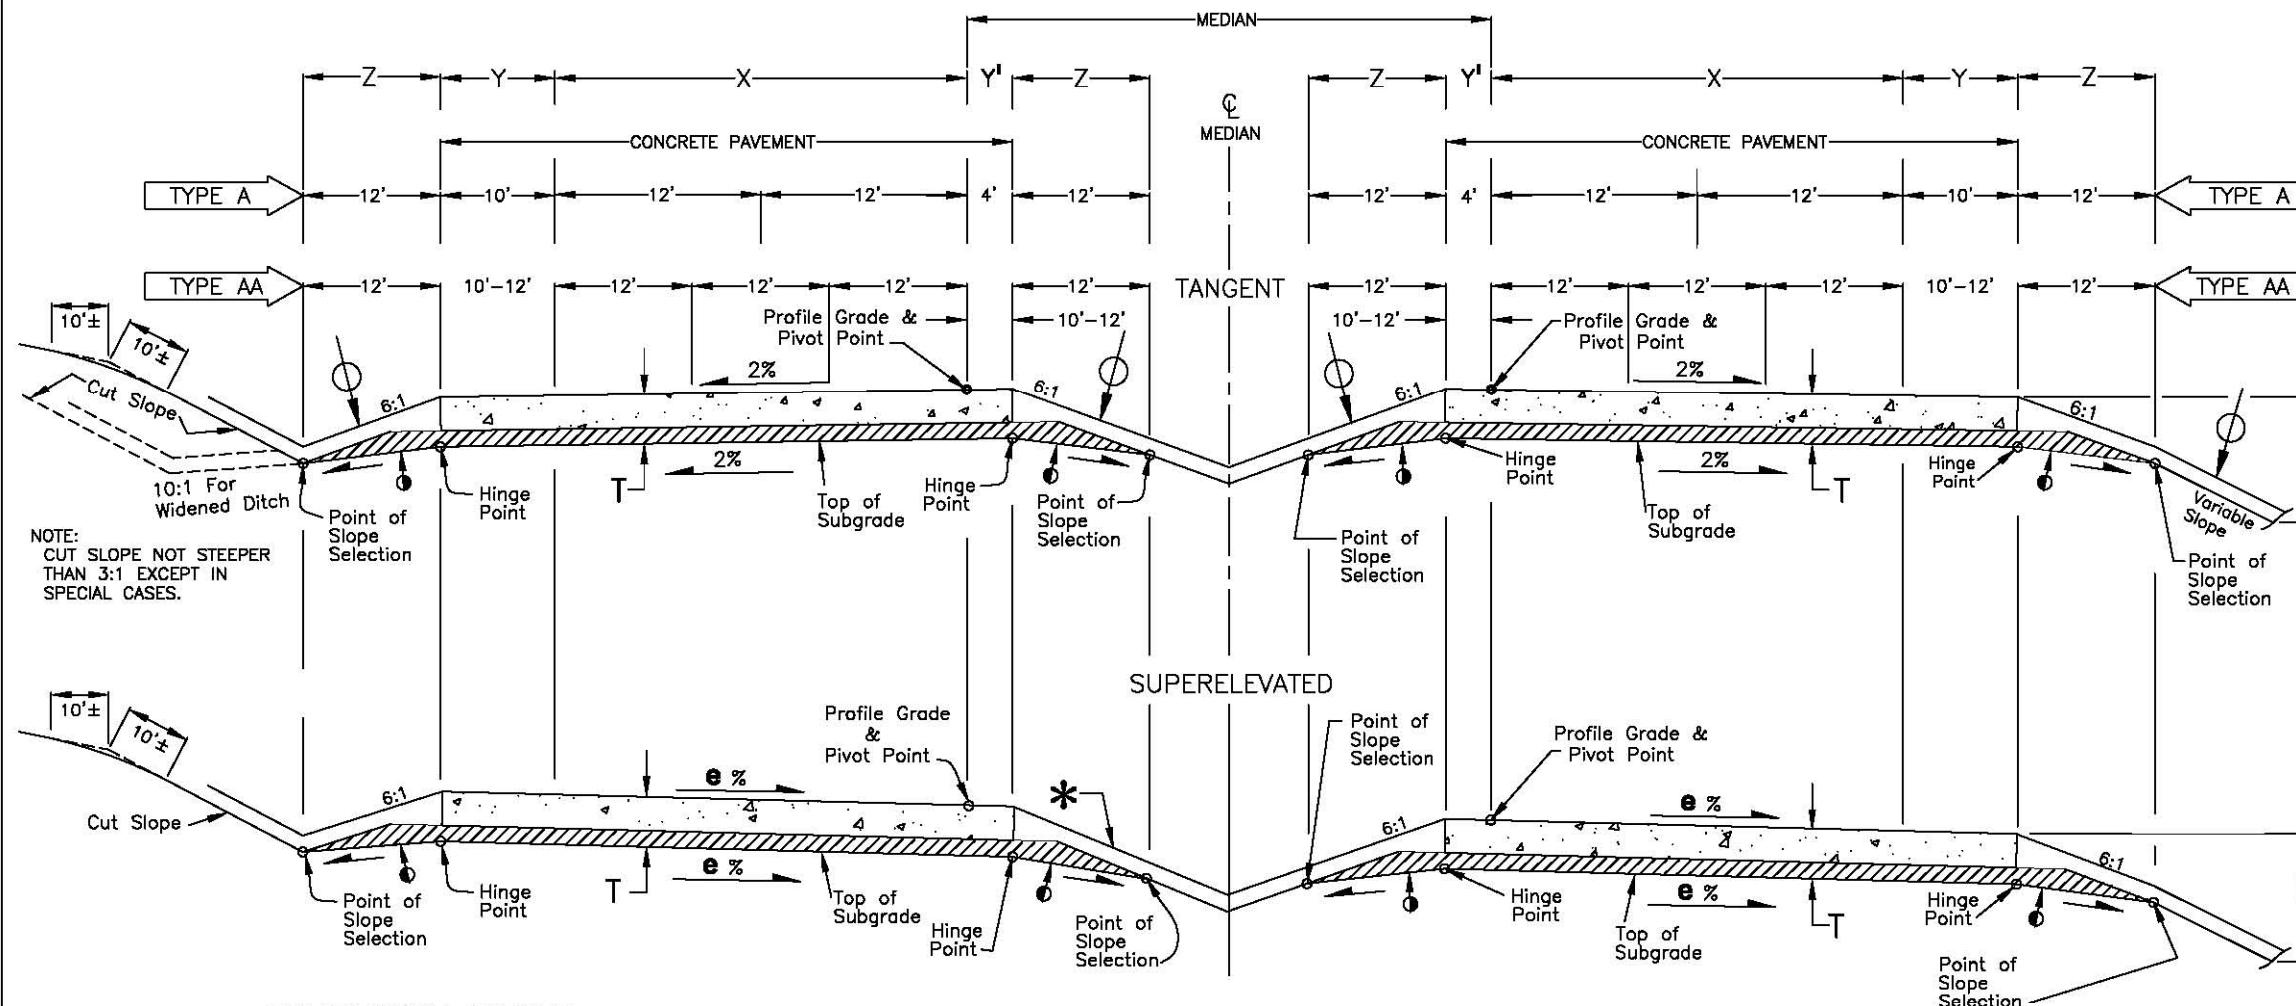

$$\text{SUBGRADE Z SLOPE (ft./ft.)} = \frac{1}{\text{Z SLOPE}} + \frac{4'' - T}{\text{Z WIDTH}}$$

(NOTE: ALL DIMENSIONS FOR FORMULA ARE IN INCHES)

**LEGEND**

- T = TOTAL THICKNESS OF THE PAVEMENT STRUCTURE FROM TOP OF PAVEMENT TO TOP OF SUBGRADE.
- T<sub>m</sub> = MAXIMUM THICKNESS OF T WHICH WILL ALLOW A 50:1 OR STEEPER SLOPE BETWEEN THE HINGE POINT AND THE POINT OF SLOPE SELECTION.
- T<sub>m</sub> FOR 12' Z SLOPE @ 6:1 = 25.12 inches
- FOR T GREATER THAN T<sub>m</sub>, DIMENSION Z MUST BE INCREASED TO THE DISTANCE AT WHICH A 50:1 SLOPE FROM THE HINGE POINT INTERSECTS THE 6:1 SLOPE FROM THE SHOULDER.
- H = THE VERTICAL DISTANCE FROM THE TOP SURFACE OF THE EDGE OF OIL TO THE TOE OF SLOPE.
- e = MAXIMUM SUPERELEVATION AS REQUIRED.
- = SUBGRADE Z SLOPE 50:1 OR STEEPER. (2%)
- = MINIMUM 4" TOPSOIL OR SPECIFIED ALTERNATIVE.
- \* = 6:1 OR FLATTER.
- = HOT MIX ASPHALT
- = BASE COURSE
- = SUBBASE

TYPICAL SECTION 6 LANE OR 4 LANE DIVIDED CONCRETE PAVEMENT TYPE AA AND A

- NOTES**
1. PAVEMENT THICKNESS DETERMINED BY PAVEMENT DESIGN; SEE CDOT PAVEMENT DESIGN MANUAL.
  2. ALL SECTIONS SHOWN ARE SUBJECT TO MODIFICATIONS DEPENDING ON REQUIREMENTS FOR EACH PROJECT.
  3. ALL THICKNESSES OF SUBBASE, BASE COURSE AND SURFACE COURSE ARE TO BE SHOWN ON PLANS AS APPROXIMATE.
  4. DETAILS OF SPEED CHANGE LANES WILL BE SHOWN ON PLANS.
  5. IF ADDITIONAL LANES WILL BE ADDED IN THE FUTURE IN THE MEDIAN AREA, FOR INITIAL MEDIAN WIDTHS OF 54 TO 80 FEET, THE TYPICAL SECTION SHALL PIVOT ABOUT THE MEDIAN  $\text{C}$  INSTEAD OF THE PROFILE GRADE.
  6. SEE TABLE 4-2 FOR FILL SLOPE STANDARDS.
  7. INCLUDE APPROPRIATE TYPICAL SECTION GENERAL NOTES.
  8. SEE FIGURE 4-3 FOR OTHER MEDIAN TREATMENTS.

DIMENSION TABLE

SECTION TYPE	X	Y	Y'	Z
	FEET			
AA (TRUCK DHV > 250)	36	12	12	12
AA (TRUCK DHV ≤ 250)	36	10	10	12
A	24	10	4	12

FORMULA FOR SUBGRADE Z SLOPE

SUBGRADE Z SLOPE (ft/ft.) =

$$\frac{1}{Z \text{ SLOPE}} + \frac{4'' - T}{Z \text{ WIDTH}}$$

(NOTE: ALL DIMENSIONS FOR FORMULA ARE IN INCHES)

LEGEND

- T = TOTAL THICKNESS OF THE PAVEMENT STRUCTURE FROM TOP OF PAVEMENT TO TOP OF SUBGRADE.
- T<sub>m</sub> = MAXIMUM THICKNESS OF T WHICH WILL ALLOW A 50:1 OR STEEPER SLOPE BETWEEN THE HINGE POINT AND THE POINT OF SLOPE SELECTION.
- T<sub>m</sub> FOR 12' Z SLOPE @6:1 = 25.12 inches
- FOR T GREATER THAN T<sub>m</sub>, DIMENSION Z MUST BE INCREASED TO THE DISTANCE AT WHICH A 50:1 SLOPE FROM THE HINGE POINT INTERSECTS THE 6:1 SLOPE FROM THE SHOULDER.
- H = THE VERTICAL DISTANCE FROM THE TOP SURFACE OF THE EDGE OF CONCRETE TO THE TOE OF SLOPE.
- e = MAXIMUM SUPERELEVATION AS REQUIRED.
- = SUBGRADE Z SLOPE 50:1 OR STEEPER. (2%)
- = MINIMUM 4" TOPSOIL OR SPECIFIED ALTERNATIVE.
- \* = 6:1 OR FLATTER.
- [Dotted] = CONCRETE PAVEMENT
- [Cross-hatched] = BASE COURSE
- [Diagonal lines] = SUBBASE

# TYPICAL SECTIONS MEDIAN, RAMP, AND FRONTAGE ROAD DETAILS FIGURE 4-3

INITIAL AND ULTIMATE CONSTRUCTION LANES TO BE ADDED TO MEDIAN IN FUTURE

INITIAL CONSTRUCTION : FLUSH MEDIAN

ULTIMATE SECTION : FLUSH MEDIAN

INITIAL CONSTRUCTION : DEPRESSED MEDIAN

ULTIMATE SECTION : DEPRESSED MEDIAN

NOTE: THESE TYPICAL SECTIONS DEPICT THE METHOD USED FOR PIVOTING SUPERELEVATION WHEN DEPRESSED MEDIANS MAY ULTIMATELY BECOME FLUSH MEDIANS. LANE AND SHOULDER DIMENSIONS SHOWN ON THE "ULTIMATE" TYPICAL SECTIONS ILLUSTRATE MAXIMUM WIDTHS WITH TRUCK TRAFFIC  $\geq 250$  DHV.

⊕ 52 FT. IS THE MINIMUM WIDTH FOR A DEPRESSED MEDIAN WHEN 12 FT. SHOULDERS ARE USED. NARROWER ULTIMATE MEDIANS MUST BE PAVED FLUSH.

RAISED MEDIAN

FLUSH MEDIAN

RAMP SECTION  
2-LANE EXIT OR ENTRANCE

FRONTAGE ROAD  
(HORIZONTAL PROXIMITY TO MAINLINE)

RAMP SECTION SINGLE LANE

MEDIAN BETWEEN OFFSET ROADWAYS

⊕ = SUBGRADE Z SLOPE 50:1 OR STEEPER. (2%)  
⊕ = MINIMUM 4" TOPSOIL OR SPECIFIED ALTERNATIVE.

TYPICAL SECTION URBAN BITUMINOUS OR CONCRETE PAVEMENT FIGURE 4-4

NOTE:  
CUT SLOPE NOT STEEPER  
THAN 3:1 EXCEPT IN  
SPECIAL CASES.

NOTES

1. PAVEMENT THICKNESS DETERMINED BY PAVEMENT DESIGN; SEE CDOT PAVEMENT DESIGN MANUAL.
2. ALL SECTIONS SHOWN ARE SUBJECT TO MODIFICATIONS DEPENDING ON REQUIREMENTS FOR EACH PROJECT.
3. ALL THICKNESSES OF SUBBASE, BASE COURSE AND SURFACE COURSE ARE TO BE SHOWN ON PLANS AS APPROXIMATE.
4. SEE FIGURE 4-3 FOR OTHER MEDIAN TREATMENTS.
5. SEE TABLE 4-2 FOR FILL SLOPE STANDARDS.
6. SHOULDER WIDTH IS VARIABLE. BICYCLE TRAFFIC, SNOW STORAGE AND DRAINAGE SHOULD BE CONSIDERED.

LEGEND

- T** = TOTAL THICKNESS OF THE PAVEMENT STRUCTURE FROM TOP OF PAVEMENT TO TOP OF SUBGRADE.
- H** = THE VERTICAL DISTANCE FROM THE TOP SURFACE OF THE EDGE OF OIL TO THE TOE OF SLOPE.
- e** = MAXIMUM SUPERELEVATION AS REQUIRED.
- = MINIMUM 4" TOPSOIL OR SPECIFIED ALTERNATIVE.
- \*** = 4 FOOT DESIRABLE, WIDER IF REQUIRED FOR FUTURE SIDEWALK.
- = HOT MIX ASPHALT
- = BASE COURSE
- = SUBBASE

TYPICAL SECTION CROWNED BITUMINOUS PAVEMENT WITH TREATED BASE TYPES B THRU D

LEGEND

T = TOTAL THICKNESS OF THE PAVEMENT STRUCTURE FROM TOP OF PAVEMENT TO TOP OF SUBGRADE.  
 T<sub>m</sub> = MAXIMUM THICKNESS OF T WHICH WILL ALLOW A 50:1 OR STEEPER SLOPE BETWEEN THE HINGE POINT AND THE POINT OF SLOPE SELECTION.

- T<sub>m</sub> FOR 8' Z SLOPE @4:1 = 25.58 inches
- T<sub>m</sub> FOR 6' Z SLOPE @4:1 = 19.06 inches
- T<sub>m</sub> FOR 4' Z SLOPE @4:1 = 13.54 inches
- T<sub>m</sub> FOR 8' Z SLOPE @6:1 = 17.08 inches
- T<sub>m</sub> FOR 6' Z SLOPE @6:1 = 13.56 inches
- T<sub>m</sub> FOR 4' Z SLOPE @6:1 = 10.04 inches

FOR T GREATER THAN T<sub>m</sub>, DIMENSION Z MUST BE INCREASED TO THE DISTANCE AT WHICH A 50:1 SLOPE FROM THE HINGE POINT INTERSECTS THE 6:1 SLOPE FROM THE SHOULDER.

H = THE VERTICAL DISTANCE FROM THE TOP SURFACE OF THE EDGE OF OIL TO THE TOE OF SLOPE.

e = MAXIMUM SUPERELEVATION AS REQUIRED.

▲ = SUBGRADE Z SLOPE 50:1 OR STEEPER. (2%)

○ = MINIMUM 4" TOPSOIL OR SPECIFIED ALTERNATIVE.

B = MAY INCLUDE BASE, SUBBASE, OR TREATED BASE.

▼ = SEE TABLE 4-2 FOR FILL SLOPE STANDARDS

▶ = SHOULDER EXTENSIONS FOR SUPERELEVATED SECTION ARE APPROXIMATELY LEVEL.

\* = APPROPRIATE SECTION DETERMINED BY FUNCTIONAL CLASSIFICATION, DESIGN TRAFFIC VOLUMES AND DESIGN SPEED. SEE SECTION 100.

▨ = HOT MIX ASPHALT

▨ = BASE COURSE

▨ = SUBBASE

FORMULA FOR SUBGRADE Z SLOPE

$$\text{SUBGRADE Z SLOPE (ft./ft.)} = \frac{(6")(.020 \text{ ft./ft.}) + (Z \text{ WIDTH} - 6")\left(\frac{1}{Z \text{ SLOPE}}\right) + 4" - T}{Z \text{ WIDTH}}$$

(NOTE: ALL DIMENSIONS FOR FORMULA ARE IN INCHES)

\* DIMENSION TABLE

SECTION TYPE	X	Y	Z
	FEET		
B	12	10	8
B	12	8	8
C	12	6	8
C	11	6	6
D	11	4	6
D	10	4	4

NOTES

- PAVEMENT THICKNESS DETERMINED BY PAVEMENT DESIGN; SEE CDOT PAVEMENT DESIGN MANUAL.
- ALL SECTIONS SHOWN ARE SUBJECT TO MODIFICATIONS DEPENDING ON REQUIREMENTS FOR EACH PROJECT.
- ALL THICKNESSES OF SUBBASE, BASE COURSE AND SURFACE COURSE ARE TO BE SHOWN ON PLANS AS APPROXIMATE.
- DETAILS OF SPEED CHANGE LANES WILL BE SHOWN ON PLANS.
- SEE STANDARD PLANS FOR DETAILS OF CUT SLOPE TREATMENT, FLARING AND WIDENING.
- SEE TABLE 4-2 FOR FILL SLOPE STANDARDS.
- INCLUDE APPROPRIATE TYPICAL SECTION GENERAL NOTES.
