Construction offers opportunities for handson work and the chance to build structures from the ground up. This industry is composed of workers who build residential, industrial, and commercial buildings; contractors who build sewers, highways, bridges and other infrastructure projects. It includes people who perform skilled activities such as carpentry, painting, plumbing and electrical work. If you enjoy working with your hands, collaborating on projects and seeing the fruits of your labor materialize; construction could be the career for you!

Start Exploring Construction Careers

Step 1: Identify your interests

Compare your interests, skills and work values with construction occupations using Labor Market Information's Career Explorer:

Visit <u>www.coworkforce.com/lmigateway</u>

- Click on "Services for Individuals"
- Choose "Career Services"

This will take you to "Career Explorer" where you can match your skills to occupations.

Step 2: Explore the construction industry & careers

Learn about high-growth, in-demand careers and what they pay on the LMI Gateway website:

www.coworkforce.com/lmigateway

For more information about construction careers:

http://www.careeroverview.com/construction-careers.html

Step 3: Find education, training & financial aid Discover the best education or training institutions for

Discover the best education or training institutions for your career goals and how to get money for school at http://www.collegeincolorado.org

Step 4: Find available job openings www.connectingcolorado.com

A Day In the Life of...

Kevin Marion, Construction Superintendent Cobb Mechanical, Colorado Springs, CO

Kevin began landscaping as a summer job while still in high school. He found that he liked working outside and enjoyed working with his hands to create a product others could see and admire. When he graduated he decided to find work in construction. He began working in plumbing and pipefitting, learning his trade through on-the-job training. This job taught Kevin some important lessons: all work needs to be carefully planned and clear communication is critical to success.

Kevin now works at Cobb Mechanical, a commercial heating, ventilation and air conditioning contractor. As a superintendent, Kevin is responsible for scheduling and supervising the work completed by his crew. He is currently working on a medical building project in Denver. Kevin expects that this job will take about 20 months to complete and that he will need about 100 workers. He began this job by reading the blueprints and planning his work. The real challenge in every job is meeting the project deadlines. He works around form setters, electricians and others, coordinating the efforts of his crew. He maintains daily logs of job site activity to insure communication and follow up. He corresponds with engineers and architects and work with building inspectors. He expects to spend one-half of his time on the job site and the other half in the office.

Looking back over his career, Kevin recommends that anyone interested in construction work take classes in blueprint reading, math, reading and writing because those skills are required for most construction jobs. When Kevin talks about his job, he becomes animated. He clearly likes his work. What does Kevin like best about construction? "Every job is such a learning experience. Each job is different and I really like that!"

A Day in the Life of...

TH Mack Sr. Exec Director AmeriBuild Company Denver, CO

TH begins his day at 5am by reviewing schedules and making email and phone contacts. Next, he visits construction job sites and his company's training center. There he looks for students that listen intently and who are engaged in their work. For the rest of his busy day, he attends business meetings, establishes his clientele and lines up new jobs, before closing his day with updates from project managers.

TH loves seeing the transformation in young men and women at his training center from somewhat confused and uncommitted individuals to empowered, dedicated contributors with a sense of pride and ownership in the building process.

TH has a bachelor's degree in Finance and Business Law as well as a Construction Management Certificate. He credits finance for providing him many skills needed to be successful in his construction business. Other foundations include high school math, language arts courses that taught communication and vocational classes in carpentry. Gym and organized sports taught him the value of teamwork and collaboration, provided decision-making skills and how to learn from failure.

Who do you want to be tomorrow?

Occupation	Average Hourly/Annual Wage	Education/Training	Suggested Programs of Study
Construction Laborers Perform tasks involving physical labor. May operate hand and power tools of all types, clean	\$14.71 / \$30,591 and prepare sites, or assist other workers.	Moderate-term on-the-job training, Apprenticeships	Construction Trades, welding, scaffolding erecting, concrete finishing

Apprenticeship

Registered Apprenticeships combine classroom instruction and on-the-job training supervised by journey-level craft persons or trade professionals. Join a Registered Apprenticeship Program and get paid while you go to school!

This industry has many apprenticeships. Here are some examples:

- Carpenter
- Cement Mason
- Construction Equipment Mechanic
- Glazier
- Boilermaker
- Dry Wall Applicator
 - Painter
 - Plumber
- Pipefitter/Sprinkler Fitter
- Insulation Worker
- Tile Setter
- Electrician
- Terazzo Worker
