

<b>COLORADO DEPARTMENT OF TRANSPORTATION INITIAL SITE ASSESSMENT (ISA)</b>	Region: 2 Route ID: US 50	Project No.: STA 050A-002 Project Code (SA#): 19056
--	------------------------------	--

**Project Description**

Project Name: **Westbound US 50 Lane Wills Blvd. to McCulloch Blvd.**  
Milepost Begin: **312.87** Milepost End: **307.00** County: **Pueblo**  
Location: **Approximate project center: NE ¼ SE ¼ Section 7, T20 S, R65 W (Lat 38.324 and Long -104.701)**  
Main Project Elements: **Widen US 50 (WB third travel lane) from Wills Blvd. to McCulloch Blvd. (approx 5.87 miles) and build new infrastructures at Purcell Blvd./US 50 and Pueblo Blvd./US 50 (See Figure 1)**

**Project Features (Check if applies)**

<input type="checkbox"/> Structure Acquisition	<input checked="" type="checkbox"/> Structure Modification	<input checked="" type="checkbox"/> Structure Demolition
<input checked="" type="checkbox"/> New ROW	<input checked="" type="checkbox"/> Easements	<input checked="" type="checkbox"/> Utility Relocation
<input checked="" type="checkbox"/> Excavation/Drilling	Disturbance depth (if known): 20 + ft	<input checked="" type="checkbox"/> Dewatering
Gw Anticipated: <b>Yes</b>	Depth to gw (if known): varies 2 to 28 ft	Gw flow direction (if known): <b>The general groundwater (GW) flows from McCulloch Blvd. toward the southeast to Williams Creek and the tributary stream of Williams Creek. On the east end of the project area, the GW flows from Wills/BNSF RR toward the southwest to Wild Horse Dry Creek. These tributary streams deposit into a larger stream, Dry Creek, located southeast of the project site (US 50). RockSol reported GW ranging from 10 to 28 feet depth below grade in the project area. Dewatering may be required at Williams and Wild Horse Dry Creek bridge structure sites. Additional information of hazards is discussed below in the Records Review and Findings sections.</b>

**Records Review & Interview(s)**

The following records/sources were used in this assessment ('No' is implied if unchecked):

ASTM Standard Environmental Record Sources     OPS     CDPHE     CDOT Internal Database Date: **GeoSearch Agency Records Radius Report, 7/29/2015 (Area searched shown on Figure 2): A total of 44 locatable facilities and no un-locatable facilities were reported in the 2015 database search in the vicinity of the project area. The former 50 West Amoco site, known as Auto World, a car dealership at 2825 West Highway 50 was not considered a potential hazardous concern based on the No Further Action Request (NFA) for groundwater monitoring for petroleum contamination. A monitoring and remediation report for this facility, which includes figures showing the closed extent of soil and ground contamination, is attached in Attachment 1. The March 28, 2014 report shows eight (8) consecutive quarters of all sampled on-site wells and observed concentrations above Tier 1 Risk Based Screening Levels (RBSLs), but recent BP Risk modeling indicates there is no risk to Points of Exposure (POE)s. Soil BTEX concentrations above Tier 1 RBSLs are still present in certain areas of the subject site, but recent BP Risk modeling indicates there is no risk to POEs. On March 28, 2014, a NFA was requested due to exposure pathways being eliminated at this site with reasons indicating results being below (RBSL), never impacting above RBSLs, and/or no risk to receptors. In May 2014, the Division of Oil and Public Safety (OPS) concurred that the source of contamination appears to be removed at the site and the site was determined to be closed (Attachment 2). Given the potential history of contamination adjacent to the right-of-way, this project site presents a haz mat concern. The remaining facilities in the database search have no record of contamination, the contamination investigations were closed, and/or were located downgradient, sufficiently distant, or both from the project corridor to not be considered a hazard to the project. Table 1 includes a summary for each facility.**

ASTM Standard Search Radii or  Modified Search Radii: **1 mile**

Previous Environmental Reports/CDOT Files: **Geotechnical Investigation, RockSol July 29, 2015; US 50 West PEL Study, June 2012; ISA for US 50 Baltimore to Wills (SA 18556), January 2011; ISA for US 50 West EB Lane Wills to Purcell and turn lane at McCulloch (SA 19056), January 2011; Foundation Investigation Report; US 50 West - Westbound Preliminary Design; Fourth Quarter 2013 Monitoring and Remediation Report & No Further Action Request, March 28, 2014; NFA Determination, May 1, 2014.**

Other Files/Databases (Assessor, Fire dept., Building, Planning, etc.):

Aerial Photograph(s)     Current – date: **2015**     Historic – year(s):

Sanborn Map(s) – year(s): **None available for this area**  
 Local Street Directories – year(s): **Not reviewed**

Historic Land use(s) within the project area (if known): **4-lane highway through semi-urban commercial and residential corridor with most development occurring since the late 1950's**

Interviews (Names/Title/Date/Comments): **None**

**Site Reconnaissance & Description**

Visual inspection conducted Inspection Date: **8/6/2015**  
 If 'No' document the reason:

Project area and land use(s) description:

**The project site is an existing asphalt paved, 4-lane divided highway that transitions through natural and built environments. Commercial businesses, auto dealerships, and auto facilities dominate the intersection of US 50 and Wills Blvd. Undeveloped rural lands follow along the corridor from BNSF RR to Purcell Blvd. with a buffer zone separating US 50 EB and WB lanes. The corridor only widens to 4 lanes with 4 corner lanes at the intersections of McCulloch Blvd., Purcell Blvd., and Pueblo Blvd. A mixture of semi-suburban residential and industrial/commercial business exists amid Purcell Blvd. and McCulloch Blvd. On the west side of US 50, industrial businesses consisting of industrial warehouses and auto repair shops dominate the facilities adjacent to the corridor. Commercial businesses located near intersections consist of filling stations and big box retail stores. The industrial/commercial businesses are set back from the highway separated by the highway's buffer zone, the side street (access to the businesses), and the side street's buffer zone. Sparse suburban residences are adjacent to US 50 within the industrial/commercial businesses areas, but most semi-suburban residences are located 1/4 mile to 1/2 mile away from US 50.**

Industrial  Light Industrial  Commercial  Residential  Agricultural  Undeveloped  Other: **US 50 Paved Highway and adjacent ROW**

Adjacent land use(s) description:

**See Above**

Industrial  Light Industrial  Commercial  Residential  Agricultural  Undeveloped  Other:

**Potential Environmental Concerns on the immediate project area or directly adjacent to it**

(Select from dropdown menu – Yes, No, Expected, or Unknown)

Potential Environmental Concern	Project Area	Adjacent Area	Potential Environmental Concern	Project Area	Adjacent Area
Evidence of underground tanks (pipes, vents, fill caps, etc.)	No	Yes	Protected/fenced/placarded area(s)	No	Yes
Aboveground storage tank(s)	No	Yes	Liquid waste (pits, ponds, etc.)	No	No
Monitoring/water well(s)	Yes	Yes	Oil sheen (soil/water)	No	No
Electrical/transformer Equipment	Yes	Yes	Oil/gas well(s)	No	no
Cistern(s), sump(s) drain(s)	No	No	Mine tailings/waste	No	No
Barrel(s), drum(s), container(s)	No	Yes	Painted/preserved material(s)	Yes	Yes
Stockpile, surface trash, debris	No	No	Odor	No	No
Exposed/buried landfill	No	No	Chemical storage	No	No
Batteries	No	Yes	Suspect asbestos containing material	Yes	Yes
Surface staining	No	No	Suspected methamphetamine lab	No	No
Stressed vegetation	No	No			

**Findings/Conclusions:**

Are known hazardous or other waste sites on or adjacent to the project area, which may affect the project? **No**  
 Explain: **The former 50 West Amoco, known as Auto World, at 2825 US 50 West (NW corner of Wills Blvd. and US 50 Intersection) has received a No Further Action determination for petroleum contaminated soil and ground water (May 2014). Groundwater monitoring wells (MW-9, MW-17, and MW-18) are present directly adjacent to the project area but are not anticipated to be impacted during construction. The agency record database (GeoSearch) did not reveal any other facilities that constitute a hazardous materials or waste concern to the project. The site visits also did not reveal any hazardous material or waste concerns on or adjacent to the project footprint.**

**Recommendations:**

Attach additional pages as needed

**Recommendations:**

- Materials Management Plan    
  Force Account    
  Modified CDOT Specification(s)    
  Additional Assessment/Investigation\*

Explain: **Even though no significant active waste sites were identified in this ISA, because of the magnitude of the project and partial acquisition of a previously closed contaminated property (50 West Amoco site), a contractor prepared Materials Management Plan (MMP) that adheres to CDOT Specification 250 is recommended. The MMP must be submitted to CDOT for approval at least 10 days prior to project initiation. During construction, should hazardous or petroleum waste be encountered, the work at the previously contaminated location should stop, the procedures in the contractor's MMP should be implemented, and the CDOT project engineer should be notified immediately. No further hazardous materials assessment is required. In summary, a contractor prepared / CDOT approved MMP that adheres to Standard CDOT 250 Specification is required.**

\*Additional work must be approved by CDOT.

Dear Mr. Secondo:

Quarterly groundwater monitoring was completed at the referenced site on December 10, 2013. Monitoring results are summarized on the attached Monitoring and Remediation Report (MRR). A copy of the attached MRR will be uploaded to CDLE-OPS's FTP site.

If you have any questions or concerns, please contact us.

Respectively submitted,

RESOURCE GEOSCIENCE, INC.

Jonathan Whitacre, P.G.  
Operations Manager

Former 50 West Amoco

2825 U.S. Highway 50 West, Pueblo, Colorado

**Event ID 10161 / Facility ID 9875**

RGI #05734099

Dear Mr. Secondo:

Quarterly groundwater monitoring was completed at the referenced site on December 10, 2013. The following narrative summarizes the site information, environmental data and corrective action efforts completed to date.

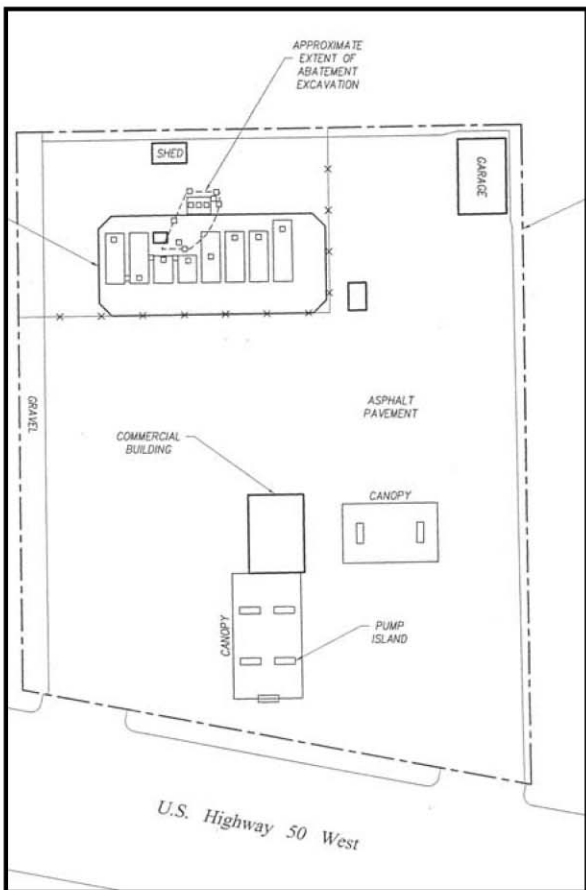

### **BACKGROUND**

The site was operated as Gianetto Oil, a petroleum product bulk plan and gas station, from approximately 1970 to January 2001. McFarland Oil, Inc. (McFarland) operated the site from January 2001 to July 2006. Eight (8) above ground storage tanks (ASTs) were removed from the site on July 20, 2006. While the ASTs were reported to be in good condition, elevated gasoline and diesel contaminant

concentrations were reported during the tank closure activities. In response, approximately 540 cubic yards of impacted soil were excavated from the vicinity of the loading rack between August and November 2006 and transported off site for disposal. Groundwater was reportedly not encountered during the impacted soil excavation.

### Release Information (release date, source, petroleum type, how discovered, steps to stop release)

Subsequent subsurface assessments completed at the site by Resource Geoscience, Inc. (RGI) identified three (3) apparent petroleum contaminant sources; the area of the former above-ground storage tanks, a line or dispenser in the area of the east pump island and, finally, a line or dispenser in the area of the south pump island.

The release occurred sometime prior to July 20, 2006. We are not aware of any reported releases at the site prior to the discovery of contaminants on July 20, 2006. The contaminants discovered consist of gasoline and diesel petroleum. The release was discovered during the removal of eight (8) ASTs on July 20, 2006. The ASTs were never replaced.

### Past Investigations

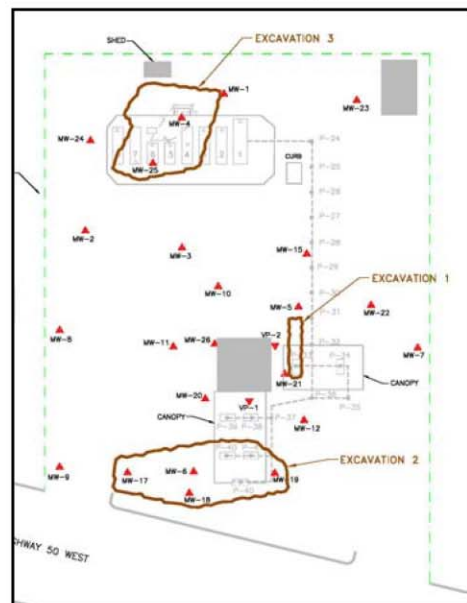

We are not aware of any subsurface assessments of the property prior to the AST removals in 2006. Numerous subsurface assessments were performed after the ASTs were removed. The Conceptual Site Model (CSM) below encapsulates the data obtained in the various assessments.

### Past Remediation Efforts

The original CAP, dated November 12, 2008, was approved for pilot testing of air sparge (AS) and soil vapor extraction (SVE) remedial technology along with chemical injection using Remediation Products, Inc.'s BOS 200®.

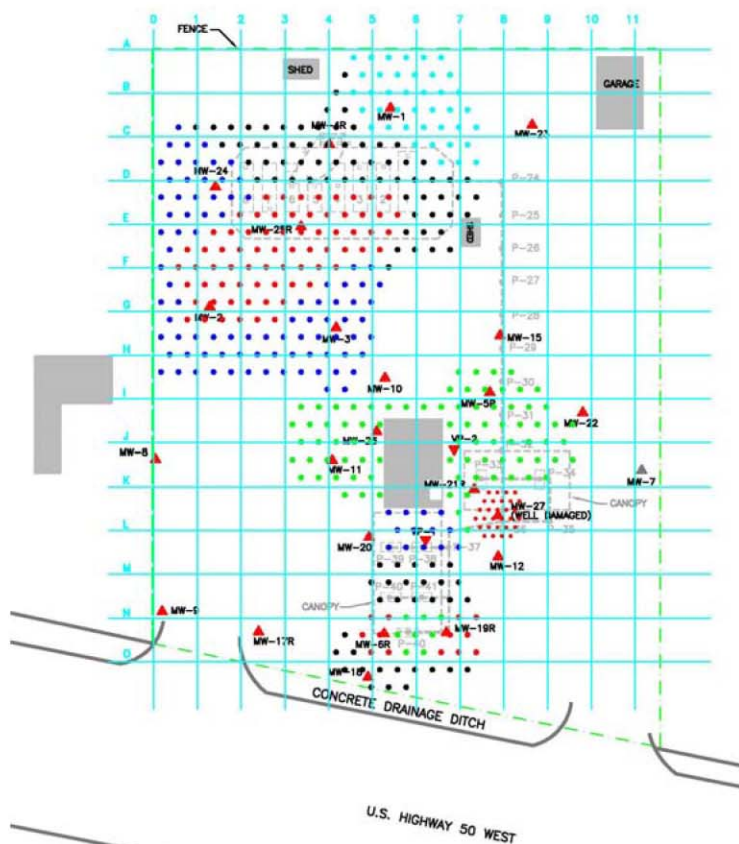

AS/SVE pilot testing activities during February 2008 revealed the technology would not be practical for use at the subject site. A pilot injection of BOS 200® in the area of monitoring well MW-6 during June 2008 revealed it would be a practical means of remediating petroleum-impacted soil and groundwater at the subject site.

A CAP Modification proposing excavation and aeration of contaminated soil at the site was approved by CDLE-OPS on September 9, 2009. CAP implementation activities began August 31, 2009 and were largely completed by mid-December 2009. Approximately 8,570 cubic yards of contaminated soil were excavated from three (3) areas of the site. The soil stockpiles were aerated and amended with a MicroBlaze® solution before being returned to the excavations. The excavation and aeration activities were not successful in reaching clean-up goals for the site.

RGI installed and sampled 20 small diameter (3/4" O.D.) piezometers during December 2010 and early January 2011. In order to gain information regarding the vertical distribution of petroleum contaminants in groundwater, 13 of the 20 piezometers were screened "shallow" (generally 12-17 feet +/- bgs) and the remaining piezometers were screened "deep" (generally 17-22 feet +/- bgs). In addition to the piezometer installations, RGI advanced 10 soil borings in different areas of the site to obtain information regarding the vertical distribution of petroleum contaminants in soil. In all, 21 groundwater samples and 69 soil samples were analyzed in-house by RPI. Five (5) duplicate groundwater samples were also submitted to Technology Laboratory, Inc. in Fort Collins, Colorado to compare against the analytical data generated by RPI.

RGI performed a full-scale BOS 200® injection at the site between October 13, 2011 and January 6, 2012. RGI injected a total of 33,350 pounds of BOS 200® in a total of 442 injection locations to treat petroleum contaminated soil and groundwater at the site, as noted on the figure to the right.

### Conceptual Site Model (CSM) (where contamination is present, its origin and transport and the plan to remove or reduce it before it impacts a POE)

Based on our assessments, it appears gasoline contaminants entered the subsurface in the vicinity of the AST area and in the vicinities of the former dispenser islands on the east and south sides of the existing site building. The contaminants migrated downward through the clay soils, reaching groundwater at a depth of approximately 13-15 feet below ground surface (bgs). The soil and groundwater contaminants appear to have migrated in the general direction of groundwater flow (southwest) and impacted a large portion of the subject site and beyond. The nearest Points of Exposure (POE) are the west property boundary located approximately 50 feet west of one (1) suspect source (AST area) and the south property boundary located approximately 50 feet south of another suspect source (south dispenser islands). Based on existing data, it appears the west and south property boundaries have been impacted by MTBE above Tier 1 RBSLs. Remediation efforts have been focused on limiting the potential for contaminants to migrate to the POE.

### Site Specific Target Levels (SSTLs)

Site specific fate and transport modeling has not been completed for this release. The Tier 1 Risk-Based Screen Levels (RBSLs) are being used as the cleanup goals.

## Potentially Impacted Points of Exposure (POEs)

As stated above, the nearest Points of Exposure (POE) are the west property boundary located approximately 50 feet west of one (1) suspect source (AST area) and the south property boundary located approximately 50 feet south of another suspect source (south dispenser islands). Based on existing data, it appears the west and south property boundaries have been impacted by MTBE in groundwater above Tier 1 RBSLs.

## RECENT ACTIVITIES

### Groundwater

The fourth quarter 2013 groundwater sampling event was completed on December 10, 2013. The groundwater sampling plan in the approved CAP for the site includes monitoring wells MW-1, MW-2, MW-3, MW-4R, MW-5R, MW-6R, MW-8, MW-9, MW-10, MW-11, MW-12, MW-13, MW-14, MW-15, MW-17R, MW-18, MW-19R, MW-20, MW-21R, MW-22, MW-23, MW-24, MW-25R, MW-26 and MW-27R. Please note well MW-8 has been inaccessible for several quarters and could not be sampled, and well MW-14 was observed to be dry and could not be sampled.

The general groundwater flow direction continues to be toward the southwest, consistent with previous groundwater monitoring events. MTBE concentrations above Tier 1 RBSLs were observed in wells MW-9 (0.099 ppm), MW-17R (0.231 ppm) and MW-26 (0.080 ppm). No other wells were found to have elevated groundwater contaminant concentrations, consistent with previous, post-injection groundwater monitoring events.

### Soil Vapor

Soil vapor samples were collected at depths of five (5) feet bgs and 10 feet bgs from soil vapor wells VP-1 and VP-2 on December 10, 2013. No soil vapor concentrations above Tier 1 RBSLs were observed.

### Confirmation Soil Sampling

Confirmation soil samples were collected from 12 locations at the subject site on December 14, 2013. These locations included MW-17R @ 14', MW-18 @ 18', MW-19R @ 13', MW-25R @ 15', MW-27R @ 15', N Exc, SW @ 19', E Exc, S-SW @ 20', E Exc, S-SE @ 20', E Exc, S-NE @ 20', E Exc, S-NW @ 20', S Exc, #2 @ 20', and S Exc, #13 @ 14'.

The *Soil Analytical Results Table* in the MRR has been updated with the results of the confirmation soil sampling. A *Confirmation Soil Sample Location Map* and the laboratory analytical report for the confirmation soil sampling are also included in the MRR.

## LNAPL

Light non-aqueous phase liquid (LNAPL) was not encountered in any of the wells sampled during this monitoring event. This is consistent with previous groundwater monitoring events.

## Remediation Efforts

No remediation efforts have occurred at the subject site since the full-scale BOS 200® injection was completed on January 6, 2012.

## MTBE and Benzene Modeling

RGI generated three (3) groundwater fate and transport models for the subject site using BP Risc version 4.2 (BP Risc) software.

Two (2) models, a *Saturated Zone Model with Dissolved Phase Source* and a *Saturated Zone Model with Saturated Soil Source*, were generated to determine if the contaminant MTBE would be expected to reach Point-of-Compliance (POC) well MW-16 located approximately 1,500 feet downgradient of the subject site. Both models indicated MTBE would never reach POC well MW-16.

One (1) *Saturated Zone Model with Saturated Soil Source* model was generated to determine if the contaminant benzene would be expected to reach the nearest Point-of-Exposure (POE), which, in this case, is the downgradient property line. The model indicated the maximum theoretical groundwater benzene concentration at the downgradient property line would be  $3.32 \times 10^{-11}$  mg/L at 100 years.

All three (3) models are presented in detail in the *Model Inputs and Results* tab of the MRR.

## REQUEST FOR NO FURTHER ACTION

Groundwater BTEX concentrations in all sampled on-site wells have been observed to be below Tier 1 RBSLs for eight (8) consecutive quarters. Groundwater MTBE has consistently been observed at concentrations above Tier 1 RBSLs, but recent BP Risc modeling indicates there is no risk to POEs. Similarly, soil BTEX concentrations above Tier 1 RBSLs are still present in certain areas of the subject site, but recent BP Risc modeling indicates there is no risk to POEs.

It is RGI's opinion there are no remaining exposure pathways related to Event ID 10161 at the subject site. As such, we respectfully request the site be considered for a No Further Action determination.

Denver, CO 80202-3660

Re: **MTBE Sampling & Analysis of POEs**  
Former 50 West Amoco  
2825 US Highway 50 West, Pueblo, Colorado  
**Event ID 10161**  
RGI #05734099

Dear Mr. Kelley:

Following are the results of our *MTBE Sampling & Analysis of POEs* for the subject site, per the Division of Oil & Public Safety (OPS) Petroleum Storage Tank Regulations, revised May 30, 2005.

A MTBE Receptor Survey and Computer Modeling report were previously submitted to your office, dated August 20, 2007 and December 4, 2007, respectively. Our MTBE Receptor Survey indicated the site should receive a Priority II Classification.

MTBE was initially discovered in groundwater at the site March 22, 2007. As such, we are using the following time frames to perform specific activities, unless otherwise directed by your department:

Activity	Priority Class II	Due Date
Sampling & Analysis of Existing Wells for MTBE	3 Months	June 22, 2007 (complete)
Submit Monitoring Report with MTBE Analysis & Receptor Survey	6 Months	September 22, 2007 (complete)
Mitigation of Water Supply	NA	NA
Sampling & Analysis of POEs	9 Months	December 22, 2007 (complete – included in this report)
Computer Modeling	9 Months	December 22, 2007 (complete)
Remediation of Core Portion of Plume	As Necessary/ Upon OPS Approval	As Necessary/ Upon OPS Approval
Soil Sampling	As Necessary	As Necessary
Groundwater Monitoring	Quarterly	Quarterly
Lateral Extent Definition	12 Months	March 22, 2008
Vertical Extent Definition	12 Months/As Necessary	March 22, 2008/As Necessary
MTBE Assessment Report Submittal	15 Months	June 22, 2008

After a review of the Colorado State Engineer's website, three (3) permitted wells, each listed as a monitoring well, were determined to be located within 2,500 feet of the subject site. Monitoring wells are not considered potential points of exposure (POEs) and are therefore, not included in further assessment. A topographic map review of the area indicates that Wildhorse Creek is located approximately 1,000 feet west, and downgradient of the site. Wildhorse Creek is a tributary to the Arkansas River system, which is used as a source of potable water. Based on this information, Wildhorse Creek is considered a POE.

A water sample was collected from Wildhorse Creek on December 3, 2007. The sample was shipped to a contract laboratory for analysis of BTEX, MTBE and GRO (TVPH) using EPA Method 8260B. Copies of the Certificate of Analysis and Chain-of-Custody form are attached.

As noted, BTEX, MTBE and GRO were not detected above the laboratory detection limits used.

We are currently obtaining access to place a downgradient well between the source and Wildhorse Creek.

In the meantime, if you have any questions or require additional information, please call.

Respectfully submitted,

Reviewed by,

Re: **MTBE Lateral Extent Definition & Assessment Report**  
Former 50 West Amoco  
2825 US Highway 50 West, Pueblo, Colorado  
**Event ID 10161**  
RGI #05734099

Dear Mr. Secondo:

Following are the results of our *MTBE Lateral Extent Definition* and our *MTBE Assessment Report Submittal* for the subject site, per the Division of Oil & Public Safety (OPS) Petroleum Storage Tank Regulations, revised May 30, 2005.

A MTBE Receptor Survey, Computer Modeling report and Sampling Analysis of POEs report were previously submitted to your office, dated August 20, 2007, December 4, 2007 and December 11, 2007, respectively. Our MTBE Receptor Survey indicated the site should receive a Priority II Classification.

MTBE was initially discovered in groundwater at the site March 22, 2007. As such, we are using the following time frames to perform specific activities, unless otherwise directed by your department:

Activity	Priority Class II	Due Date
Sampling & Analysis of Existing Wells for MTBE	3 Months	June 22, 2007 (complete)
Submit Monitoring Report with MTBE Analysis & Receptor Survey	6 Months	September 22, 2007 (complete)
Mitigation of Water Supply	NA	NA
Sampling & Analysis of POEs	9 Months	December 22, 2007 (complete)
Computer Modeling	9 Months	December 22, 2007 (complete)
Remediation of Core Portion of Plume	As Necessary/ Upon OPS Approval	As Necessary/ Upon OPS Approval
Soil Sampling	As Necessary	As Necessary
Groundwater Monitoring	Quarterly	Quarterly
Lateral Extent Definition	12 Months	March 22, 2008 (complete – included in this report)
Vertical Extent Definition	12 Months/As Necessary	March 22, 2008/As Necessary
MTBE Assessment Report Submittal	15 Months	June 22, 2008 (complete – included in this report)

After a review of the Colorado State Engineer's website, three (3) permitted wells, each listed as a monitoring well, were determined to be located within 2,500 feet of the subject site. Monitoring wells are not considered potential points of exposure (POEs) and are therefore, not included in further assessment. A topographic map review of the area indicates that Wildhorse Creek is located approximately 1,000 feet west, and downgradient of the site. Wildhorse Creek is a tributary to the Arkansas River system, which is used as a source of potable water. Based on this information, Wildhorse Creek is considered a POE.

A water sample was collected from Wildhorse Creek on December 3, 2007. BTEX, MTBE and GRO were not detected above the laboratory detection limits used for the sample collected from Wildhorse Creek. In order to collect a groundwater sample between the source and POE, a groundwater monitoring well (MW-16) was installed approximately 1,500 ft. downgradient of the site, as shown on the attached figure. A boring log for MW-16 is attached.

A groundwater sample was collected from MW-16 on February 28, 2008. MTBE was not detected above the laboratory detection limits used. A copy of the laboratory analysis results and chain-of-custody form are attached.

Based on the recent information, we do not intend to perform any additional assessment activities related to MTBE. We will, however, continue to collect groundwater samples from MW-16 during our normal quarterly monitoring for the site.

If you have any questions or require additional information, please call.

Respectfully submitted,

RESOURCE GEOSCIENCE, INC.

Thomas B. Lewis, P.E.  
President

Re: No Further Action (NFA) determination at former 50 West Amoco, 2825 US Highway 50 West, Pueblo, Pueblo County, Colorado. (Event ID 10161).

Dear Mr. McFarland:

The Division of Oil and Public Safety (OPS) has reviewed the Fourth Quarter 2013 Monitoring and Remediation Report and request for No Further Action (NFA) for the above-referenced site that was received on March 28, 2014.

Based solely upon the information submitted it appears you have removed the source of contamination and reduced the potential for endangerment to human health, safety, and the environment as a result of the contamination at this property.

A Tier 2 groundwater fate and transport model was used to demonstrate compliance with State closure criteria. If you need additional information, please contact the Public Records Center at 303-318-8525 to set up a file review.

In light of the remedial action taken at this site, and the confirmatory modeling results, OPS does not require any further investigation or remedial action at this time. **OPS cannot release you from any liability that may be associated with any petroleum contamination at or from this site. If the function of the property is modified for a different use and the new business does not dispense petroleum products, the OPS must be contacted immediately.** This NFA letter is in reference to the confirmed petroleum release on July 27, 2006.

Please address correspondence regarding this site to me, and should you have any questions please contact me at (303) 318-8540.

Sincerely,

Vincent P. Secondo, P.G.  
Environmental Protection Specialist  
Petroleum Program

Distance from Property: 0.02 mi. W

## **INCIDENT INFORMATION**

GSID#: 1093229

NRC ID#: 1093229

INCIDENT LOCATION: NOT REPORTED

INCIDENT ADDRESS: HWY 50 AT MCCULLOCH AVE.  
PUEBLO, CO

INCIDENT COUNTY: PUEBLO

## **INCIDENT DETAILS**

INCIDENT DATE: 8/15/2014 14:45

INCIDENT CAUSE: OPERATOR ERROR

INCIDENT TYPE: MOBILE

INCIDENT OCCURED/DISCOVERED: OCCURRED

INCIDENT DESCRIPTION: THE CALLER IS REPORTING A RELEASE OF BATTERY ACID AND A DISCHARGE OF MOTOR OIL ONTO THE ROADWAY. THE CALLER STATED THAT A SINGLE VEHICLE ACCIDENT LEAD TO THE SPILL. THE CALLER STATED THAT THE CAUSE OF THE ACCIDENT IS BELIEVED TO BE DUE TO DRIVER INEXPERIENCE (TRUCK WAS PULLING A TRAILER WITH A CAMPER SHELL). THE CALLER ALSO STATED THAT DUE TO THE ACCIDENT THAT THERE WAS ONE FATALITY TO THE PASSENGER AND INJURIES SUSTAINED BY THE DRIVER (TRANSPORTED TO A HOSPITAL).

## **RESPONSIBLE PARTY**

RESPONSIBLE COMPANY: NOT REPORTED

ADDRESS: ADDRESS NOT REPORTED  
CITY NOT REPORTED CO

RESPONSIBLE COMPANY ORGANIZATION TYPE: PRIVATE CITIZEN

## **MATERIALS INVOLVED**

CHRIS CODE: OMT

MATERIAL REACHED WATER: NO

WATER AMOUNT: UNKNOWN AMOUNT / NOT REPORTED

MATERIAL RELEASED/AMOUNT: OIL, MISC: MOTOR / 1.5 GALLON(S)

CHRIS CODE: SFA

MATERIAL REACHED WATER: NO

WATER AMOUNT: UNKNOWN AMOUNT / NOT REPORTED

MATERIAL RELEASED/AMOUNT: SULFURIC ACID (BATTERY ACID) / 1 GALLON(S)

## **OTHER MATERIALS INVOLVED**

- NO OTHER MATERIALS INVOLVED -

## **REMEDIAL ACTION**

REMEDIAL ACTION: CLEANUP COMPLETED.

## ***Unlocatable Summary***

*This list contains sites that could not be mapped due to limited or incomplete address information.*

*No Records Found*

## ***Environmental Records Definitions - FEDERAL***

**AIRSAFS** Aerometric Information Retrieval System / Air Facility Subsystem

VERSION DATE: 10/20/14

The United States Environmental Protection Agency (EPA) modified the Aerometric Information Retrieval System (AIRS) to a database that exclusively tracks the compliance of stationary sources of air pollution with EPA regulations: the Air Facility Subsystem (AFS). Since this change in 2001, the management of the AIRS/AFS database was assigned to EPA's Office of Enforcement and Compliance Assurance.

**BRS** Biennial Reporting System

VERSION DATE: 12/31/11

The United States Environmental Protection Agency (EPA), in cooperation with the States, biennially collects information regarding the generation, management, and final disposition of hazardous wastes regulated under the Resource Conservation and Recovery Act of 1976 (RCRA), as amended. The Biennial Report captures detailed data on the generation of hazardous waste from large quantity generators and data on waste management practices from treatment, storage and disposal facilities. Currently, the EPA states that data collected between 1991 and 1997 was originally a part of the defunct Biennial Reporting System and is now incorporated into the RCRAInfo data system.

**CDL** Clandestine Drug Laboratory Locations

VERSION DATE: 03/03/15

The U.S. Department of Justice ("the Department") provides this information as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments. The Department does not establish, implement, enforce, or certify compliance with clean-up or remediation standards for contaminated sites; the public should contact a state or local health department or environmental protection agency for that information.

**DOCKETS** EPA Docket Data

VERSION DATE: 12/22/05

The United States Environmental Protection Agency Docket data lists Civil Case Defendants, filing dates as far back as 1971, laws broken including section, violations that occurred, pollutants involved, penalties assessed and superfund awards by facility and location. Please refer to ICIS database as source of current data.

**EC** Federal Engineering Institutional Control Sites

VERSION DATE: 01/14/15

This database includes site locations where Engineering and/or Institutional Controls have been identified as part

## ***Environmental Records Definitions - FEDERAL***

of a selected remedy for the site as defined by United States Environmental Protection Agency official remedy decision documents. A site listing does not indicate that the institutional and engineering controls are currently in place nor will be in place once the remedy is complete; it only indicates that the decision to include either of them in the remedy is documented as of the completed date of the document. Institutional controls are actions, such as legal controls, that help minimize the potential for human exposure to contamination by ensuring appropriate land or resource use. Engineering controls include caps, barriers, or other device engineering to prevent access, exposure, or continued migration of contamination.

**ERNSCO**                      Emergency Response Notification System

VERSION DATE: 05/10/15

This National Response Center database contains data on reported releases of oil, chemical, radiological, biological, and/or etiological discharges into the environment anywhere in the United States and its territories. The data comes from spill reports made to the U.S. Environmental Protection Agency, U.S. Coast Guard, the National Response Center and/or the U.S. Department of Transportation.

**FRSCO**                      Facility Registry System

VERSION DATE: 09/30/14

The United States Environmental Protection Agency's Office of Environmental Information (OEI) developed the Facility Registry System (FRS) as the centrally managed database that identifies facilities, sites or places subject to environmental regulations or of environmental interest. The Facility Registry System replaced the Facility Index System or FINDS database.

**HMIRSR08**                      Hazardous Materials Incident Reporting System

VERSION DATE: 06/21/15

The HMIRS database contains unintentional hazardous materials release information reported to the U.S. Department of Transportation located in EPA Region 8. This region includes the following states: Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming.

**ICIS**                      Integrated Compliance Information System (formerly DOCKETS)

VERSION DATE: 10/20/14

ICIS is a case activity tracking and management system for civil, judicial, and administrative federal Environmental Protection Agency enforcement cases. ICIS contains information on federal administrative and federal judicial cases under the following environmental statutes: the Clean Air Act, the Clean Water Act, the Resource Conservation and Recovery Act, the Emergency Planning and Community Right-to-Know Act - Section 313, the Toxic Substances Control Act, the Federal Insecticide, Fungicide, and Rodenticide Act, the Comprehensive Environmental Response, Compensation, and Liability Act, the Safe Drinking Water Act, and the Marine Protection, Research, and Sanctuaries Act.

## **Environmental Records Definitions - FEDERAL**

**ICISNPDES** Integrated Compliance Information System National Pollutant Discharge Elimination System

VERSION DATE: 10/20/14

In 2006, the Integrated Compliance Information System (ICIS) - National Pollutant Discharge Elimination System (NPDES) became the NPDES national system of record for select states, tribes and territories. ICIS-NPDES is an information management system maintained by the United States Environmental Protection Agency's Office of Compliance to track permit compliance and enforcement status of facilities regulated by the NPDES under the Clean Water Act. ICIS-NPDES is designed to support the NPDES program at the state, regional, and national levels.

**LUCIS** Land Use Control Information System

VERSION DATE: 09/01/06

The LUCIS database is maintained by the U.S. Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

**MLTS** Material Licensing Tracking System

VERSION DATE: 04/14/14

MLTS is a list of approximately 8,100 sites which have or use radioactive materials subject to the United States Nuclear Regulatory Commission (NRC) licensing requirements.

**NPDES08** National Pollutant Discharge Elimination System

VERSION DATE: 04/01/07

Information in this database is extracted from the Water Permit Compliance System (PCS) database which is used by United States Environmental Protection Agency to track surface water permits issued under the Clean Water Act. This database includes permitted facilities located in EPA Region 8. This region includes the following states: Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming. The NPDES database was collected from December 2002 until April 2007. Refer to the PCS and/or ICIS-NPDES database as source of current data.

**PADS** PCB Activity Database System

VERSION DATE: 07/01/14

The PCB Activity Database System (PADS) is used by the United States Environmental Protection Agency to monitor the activities of polychlorinated biphenyls (PCB) handlers.

**PCSR08** Permit Compliance System

VERSION DATE: 08/01/12

## ***Environmental Records Definitions - FEDERAL***

The Permit Compliance System is used in tracking enforcement status and permit compliance of facilities controlled by the National Pollutant Discharge Elimination System (NPDES) under the Clean Water Act and is maintained by the United States Environmental Protection Agency's Office of Compliance. PCS is designed to support the NPDES program at the state, regional, and national levels. This database includes permitted facilities located in EPA Region 8. This region includes the following states: Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming. PCS has been modernized, and no longer exists. National Pollutant Discharge Elimination System (ICIS-NPDES) data can now be found in Integrated Compliance Information System (ICIS).

**RCRASC** RCRA Sites with Controls

VERSION DATE: 05/19/15

This list of Resource Conservation and Recovery Act sites with institutional controls in place is provided by the U.S. Environmental Protection Agency.

**SFLIENS** CERCLIS Liens

VERSION DATE: 06/08/12

A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which United States Environmental Protection Agency has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties. This database contains those CERCLIS sites where the Lien on Property action is complete.

**SSTS** Section Seven Tracking System

VERSION DATE: 12/08/14

The United States Environmental Protection Agency tracks information on pesticide establishments through the Section Seven Tracking System (SSTS). SSTS records the registration of new establishments and records pesticide production at each establishment. The Federal Insecticide, Fungicide and Rodenticide Act (FIFRA) requires that production of pesticides or devices be conducted in a registered pesticide-producing or device-producing establishment. ("Production" includes formulation, packaging, repackaging, and relabeling.)

**TRI** Toxics Release Inventory

VERSION DATE: 12/31/13

The Toxics Release Inventory, provided by the United States Environmental Protection Agency, includes data on toxic chemical releases and waste management activities from certain industries as well as federal and tribal facilities. This inventory contains information about the types and amounts of toxic chemicals that are released each year to the air, water, and land as well as information on the quantities of toxic chemicals sent to other facilities for further waste management.

## Environmental Records Definitions - FEDERAL

**TSCA** Toxic Substance Control Act Inventory

VERSION DATE: 12/31/06

The Toxic Substances Control Act (TSCA) was enacted in 1976 to ensure that chemicals manufactured, imported, processed, or distributed in commerce, or used or disposed of in the United States do not pose any unreasonable risks to human health or the environment. TSCA section 8(b) provides the United States Environmental Protection Agency authority to "compile, keep current, and publish a list of each chemical substance that is manufactured or processed in the United States." This TSCA Chemical Substance Inventory contains non-confidential information on the production amount of toxic chemicals from each manufacturer and importer site.

**NLRRCRAG** No Longer Regulated RCRA Generator Facilities

VERSION DATE: 02/12/15

This database includes RCRA Generator facilities that are no longer regulated by the United States Environmental Protection Agency or do not meet other RCRA reporting requirements. This listing includes facilities that formerly generated hazardous waste.

Large Quantity Generators: Generate 1,000 kg or more of hazardous waste during any calendar month; or Generate more than 1 kg of acutely hazardous waste during any calendar month; or Generate more than 100 kg of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, or acutely hazardous waste during any calendar month; or Generate 1 kg or less of acutely hazardous waste during any calendar month, and accumulate more than 1kg of acutely hazardous waste at any time; or Generate 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulated more than 100 kg of that material at any time.

Small Quantity Generators: Generate more than 100 and less than 1000 kilograms of hazardous waste during any calendar month and accumulate less than 6000 kg of hazardous waste at any time; or Generate 100 kg or less of hazardous waste during any calendar month, and accumulate more than 1000 kg of hazardous waste at any time.

Conditionally Exempt Small Quantity Generators: Generate 100 kilograms or less of hazardous waste per calendar month, and accumulate 1000 kg or less of hazardous waste at any time; or Generate one kilogram or less of acutely hazardous waste per calendar month, and accumulate at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, or acutely hazardous waste; or Generate 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, or acutely hazardous waste during any calendar month, and accumulate at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste.

**RCRAGR08** Resource Conservation & Recovery Act - Generator Facilities

VERSION DATE: 02/12/15

This database includes sites listed as generators of hazardous waste (large, small, and exempt) in the RCRAInfo

## ***Environmental Records Definitions - FEDERAL***

system. The United States Environmental Protection Agency defines RCRAInfo as the comprehensive information system which provides access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). This database includes sites located in EPA Region 8. This region includes the following states: Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming.

**Large Quantity Generators:** Generate 1,000 kg or more of hazardous waste during any calendar month; or Generate more than 1 kg of acutely hazardous waste during any calendar month; or Generate more than 100 kg of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, or acutely hazardous waste during any calendar month; or Generate 1 kg or less of acutely hazardous waste during any calendar month, and accumulate more than 1kg of acutely hazardous waste at any time; or Generate 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulated more than 100 kg of that material at any time.

**Small Quantity Generators:** Generate more than 100 and less than 1000 kilograms of hazardous waste during any calendar month and accumulate less than 6000 kg of hazardous waste at any time; or Generate 100 kg or less of hazardous waste during any calendar month, and accumulate more than 1000 kg of hazardous waste at any time.

**Conditionally Exempt Small Quantity Generators:** Generate 100 kilograms or less of hazardous waste per calendar month, and accumulate 1000 kg or less of hazardous waste at any time; or Generate one kilogram or less of acutely hazardous waste per calendar month, and accumulate at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, or acutely hazardous waste; or Generate 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, or acutely hazardous waste during any calendar month, and accumulate at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste.

### **RCRANGR08**

Resource Conservation & Recovery Act - Non-Generator Facilities

VERSION DATE: 02/12/15

This database identifies RCRAInfo system sites that only handle hazardous waste, such as transporters, without generating any amount hazardous waste. The United States Environmental Protection Agency defines RCRAInfo as the comprehensive information system which provides access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). This database includes sites located in EPA Region 8. This region includes the following states: Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming.

### **HISTPST**

Historical Gas Stations

VERSION DATE: NR

This historic directory of service stations is provided by the Cities Service Company. The directory includes

## ***Environmental Records Definitions - FEDERAL***

Cities Service filling stations that were located throughout the United States in 1930.

**BF** Brownfields Management System

VERSION DATE: 04/27/15

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. The United States Environmental Protection Agency maintains this database to track activities in the various brown field grant programs including grantee assessment, site cleanup and site redevelopment. This database included tribal brownfield sites.

**CERCLIS** Comprehensive Environmental Response, Compensation & Liability Information System

VERSION DATE: 10/25/13

CERCLIS is the repository for site and non-site specific Superfund information in support of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). This United States Environmental Protection Agency database contains an extract of sites that have been investigated or are in the process of being investigated for potential environmental risk. In 2014, the Superfund Program implemented a new information system, the Superfund Enterprise Management System (SEMS). Efforts to migrate data to SEMS and to enhance data quality control are now in the final stages. The Program will continue to rely on the final CERCLIS data set (dated November 12, 2013, which reflects official end of Fiscal Year 2013 Program progress) for public reporting until a complete and accurate SEMS data set is available.

**DNPL** Delisted National Priorities List

VERSION DATE: 10/25/13

This database includes sites from the United States Environmental Protection Agency's Final National Priorities List (NPL) where remedies have proven to be satisfactory or sites where the original analyses were inaccurate, and the site is no longer appropriate for inclusion on the NPL, and final publication in the Federal Register has occurred. In 2014, the Superfund Program implemented a new information system, the Superfund Enterprise Management System (SEMS). Efforts to migrate data to SEMS and to enhance data quality control are now in the final stages. The Program will continue to rely on the final CERCLIS data set (dated November 12, 2013, which reflects official end of Fiscal Year 2013 Program progress) for public reporting until a complete and accurate SEMS data set is available.

**NFRAP** No Further Remedial Action Planned Sites

VERSION DATE: 10/25/13

This database includes sites which have been determined by the United States Environmental Protection Agency, following preliminary assessment, to no longer pose a significant risk or require further activity under CERCLA. After initial investigation, no contamination was found, contamination was quickly removed or contamination was not serious enough to require Federal Superfund action or NPL consideration.

## ***Environmental Records Definitions - FEDERAL***

**NLRRCRAT** No Longer Regulated RCRA Non-CORRACTS TSD Facilities

VERSION DATE: 02/12/15

This database includes RCRA Non-Corrective Action TSD facilities that are no longer regulated by the United States Environmental Protection Agency or do not meet other RCRA reporting requirements. This listing includes facilities that formerly treated, stored or disposed of hazardous waste.

**ODI** Open Dump Inventory

VERSION DATE: 06/01/85

The open dump inventory was published by the United States Environmental Protection Agency. An "open dump" is defined as a facility or site where solid waste is disposed of which is not a sanitary landfill which meets the criteria promulgated under section 4004 of the Solid Waste Disposal Act (42 U.S.C. 6944) and which is not a facility for disposal of hazardous waste. This inventory has not been updated since June 1985.

**RCRAT** Resource Conservation & Recovery Act - Treatment, Storage & Disposal Facilities

VERSION DATE: 02/12/15

This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste in the RCRAInfo system. The United States Environmental Protection Agency defines RCRAInfo as the comprehensive information system which provides access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS).

**DOD** Department of Defense Sites

VERSION DATE: 06/21/10

This information originates from the National Atlas of the United States Federal Lands data, which includes lands owned or administered by the Federal government. Army DOD, Army Corps of Engineers DOD, Air Force DOD, Navy DOD and Marine DOD areas of 640 acres or more are included.

**FUDS** Formerly Used Defense Sites

VERSION DATE: 06/01/15

The 2012 Formerly Used Defense Sites (FUDS) inventory includes properties previously owned by or leased to the United States and under Secretary of Defense Jurisdiction, as well as Munitions Response Areas (MRAs). The remediation of these properties is the responsibility of the Department of Defense. This data is provided by the U.S. Army Corps of Engineers (USACE), the boundaries/polygon data are based on preliminary findings and not all properties currently have polygon data available. **DISCLAIMER:** This data represents the results of data collection/processing for a specific USACE activity and is in no way to be considered comprehensive or to be used in any legal or official capacity as presented on this site. While the USACE has made a reasonable effort to

## ***Environmental Records Definitions - FEDERAL***

insure the accuracy of the maps and associated data, it should be explicitly noted that USACE makes no warranty, representation or guaranty, either expressed or implied, as to the content, sequence, accuracy, timeliness or completeness of any of the data provided herein. For additional information on Formerly Used Defense Sites please contact the USACE Public Affairs Office at (202) 528-4285.

**NLRRCRAC** No Longer Regulated RCRA Corrective Action Facilities

VERSION DATE: 02/12/15

This database includes RCRA Corrective Action facilities that are no longer regulated by the United States Environmental Protection Agency or do not meet other RCRA reporting requirements.

**NPL** National Priorities List

VERSION DATE: 10/25/13

This database includes United States Environmental Protection Agency (EPA) National Priorities List sites that fall under the EPA's Superfund program, established to fund the cleanup of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action. In 2014, the Superfund Program implemented a new information system, the Superfund Enterprise Management System (SEMS). Efforts to migrate data to SEMS and to enhance data quality control are now in the final stages. The Program will continue to rely on the final CERCLIS data set (dated November 12, 2013, which reflects official end of Fiscal Year 2013 Program progress) for public reporting until a complete and accurate SEMS data set is available.

**PNPL** Proposed National Priorities List

VERSION DATE: 10/25/13

This database contains sites proposed to be included on the National Priorities List (NPL) in the Federal Register. The United States Environmental Protection Agency investigates these sites to determine if they may present long-term threats to public health or the environment. In 2014, the Superfund Program implemented a new information system, the Superfund Enterprise Management System (SEMS). Efforts to migrate data to SEMS and to enhance data quality control are now in the final stages. The Program will continue to rely on the final CERCLIS data set (dated November 12, 2013, which reflects official end of Fiscal Year 2013 Program progress) for public reporting until a complete and accurate SEMS data set is available.

**RCRAC** Resource Conservation & Recovery Act - Corrective Action Facilities

VERSION DATE: 02/12/15

This database includes all hazardous waste sites with ongoing corrective action activity and where corrective action is statutorily required to be address but have not had corrective action imposed in the RCRAInfo system. The Corrective Action Program requires owners or operators of RCRA facilities (or treatment, storage, and disposal facilities) to investigate and cleanup contamination in order to protect human health and the environment. The United States Environmental Protection Agency defines RCRAInfo as the comprehensive information system which provides access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the

## ***Environmental Records Definitions - FEDERAL***

data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS).

**RCRASUBC** Resource Conservation & Recovery Act - Subject to Corrective Action Facilities

VERSION DATE: 02/12/15

This database includes hazardous waste sites which are potentially subject to corrective action regardless of whether they have correction action underway, plus any sites showing a corrective action event of RFI or beyond in the RCRAInfo system. Sites conducting corrective action under analogous state authorities are also included. The United States Environmental Protection Agency defines RCRAInfo as the comprehensive information system which provides access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS).

**RODS** Record of Decision System

VERSION DATE: 07/01/13

These decision documents maintained by the United States Environmental Protection Agency describe the chosen remedy for NPL (Superfund) site remediation. They also include site history, site description, site characteristics, community participation, enforcement activities, past and present activities, contaminated media, the contaminants present, and scope and role of response action.

## ***Environmental Records Definitions - STATE (CO)***

**APCDP** Air Pollution Control Division Permitted Facilities

VERSION DATE: 04/01/15

The Stationary Sources Program, located within the Air Pollution Control Division of the Colorado Department of Public Health and Environment, evaluates and develops air permits for stationary sources in Colorado. The program inspects sources to determine compliance with air regulations and permit conditions, and maintains a computerized inventory of air pollution emissions throughout the state.

**ASBESTOS** Asbestos Abatement and Demolition Projects

VERSION DATE: 12/31/14

The Colorado Department of Public Health and Environment's Air Pollution Control Division assists schools and businesses to comply with air pollution laws regulating asbestos and asbestos containing materials. The regulation that governs asbestos in Colorado is the Colorado Air Quality Control Commission's Regulation No. 8, Part B, "Emission Standards for Asbestos." Notification is required for all demolitions of all facilities and all asbestos abatement projects that exceed the trigger levels, whatever is the lesser quantity. The notification requirements apply to both friable and non-friable asbestos materials. This database contains those related projects since January 2008.

**CDL** Clandestine Drug Laboratory Locations

VERSION DATE: 05/04/15

This list of Methamphetamine lab seizures is provided by multiple sources: the North Metro Task Force, FACTS (Forensic Applications Consulting Technologies, Inc) and the Colorado Springs Police Department. The North Metro Task Force list of Methamphetamine labs were seized between 2001 and 2010. The North Metro area includes the following Cities and Counties of Colorado: Adams County, Broomfield, Brighton, Commerce City, Federal Heights, Northglenn, Thornton, and Westminster. According to Section 2 of Colorado Revised Statutes: "25-18.5-103. Discovery of an illegal drug laboratory - property owner - clean-up - liability. (1) (a) Upon notification from a peace officer that chemicals, equipment, or supplies indicative of an illegal drug laboratory are located on a property, or when an illegal drug laboratory used to manufacture methamphetamine is otherwise discovered and the property owner has received notice, the owner of any contaminated property shall meet the cleanup standards for property established by the board in section 25-18.5-102". The FACTS and Colorado Springs Police Department Methamphetamine labs were seized between 2001 and 2014.

**CDPS** Colorado Discharge Permit System Facilities

VERSION DATE: 04/14/15

The Colorado Department of Public Health & Environment's Water Quality Control Division regulates the Colorado Discharge Permit System. This system controls stormwater discharges from construction activities by requiring a Stormwater Construction Permit to reduce pollutants from entering streams, river, lakes and wetlands as a result of runoff from residential, commercial and industrial areas. This database also includes facilities with active Industrial Stormwater Permits.

## **Environmental Records Definitions - STATE (CO)**

**COVENANTS** Environmental Real Covenants List

VERSION DATE: 03/18/15

Senate Bill 01-145 gave authority to the Colorado Department of Public Health and Environment to approve requests to restrict the future use of a property using an enforceable agreement called an environmental covenant. These covenants, which are recorded with the deed and run with the land, provide a mechanism to ensure that institutional controls that are part of environmental remediation projects are properly implemented and that engineered structures are protected and maintained, so that implemented remedies continue to be protective of human health and the environment for as long as any residual contamination remains a risk.

**SPILLS** Spills Listing

VERSION DATE: 06/15/15

The Colorado Department of Public Health and Environment's Division of Emergency Preparedness and Response maintains this listing of chemical spills and/or releases.

**HWSG** Hazardous Waste Sites- Generator

VERSION DATE: 06/30/03

The Resource Conservation and Recovery Act (RCRA) was enacted by congress in 1976, followed by the promulgation of implementing regulations in 1980. In 1984, the State was authorized by EPA to implement the RCRA program in Colorado on their behalf. This facility listing includes RCRA sites listed as generators of hazardous waste (Small Quantity Generators and Large Quantity Generators) and was provided by the Colorado Department of Public Health and Environment.

Small Quantity Generators (SQG) generate, in any calendar month, more than 100 kg (220 lbs.) but less than 1,000 kg (2,200 lbs.) of RCRA hazardous waste; and generate, in any calendar month, or accumulate at any time, no more than 1 kg (2.2 lbs.) of acute hazardous waste and no more than 100 kg (220 lbs.) of material from the cleanup of a spill of acute hazardous waste; and accumulate on-site no more than 6000 kg (13,200 lbs) of hazardous waste at any one time; or, the site is a Small Quantity Generator if the site met all other criteria for a Conditionally Exempt Small Quantity Generator, but accumulated, at any time, more than 1,000 kg (2,200 lbs.) of RCRA hazardous waste.

Large Quantity Generators (LQG) generate, in any calendar month, 1,000 kg (2,200 lbs.) or more of RCRA hazardous waste; or generate, in any calendar month, or accumulated at any time, more than 1 kg (2.2 lbs.) of RCRA acute hazardous waste; or generate, in any calendar month, or accumulated at any time, more than 100 kg (220 lbs.) of spill cleanup material contaminated with RCRA acute hazardous waste.

**AST** Aboveground Storage Tank Facilities

VERSION DATE: 04/20/15

The Oil and Public Safety Division of the Colorado Department of Labor and Employment maintains this list of aboveground storage tank (AST) facilities. This AST database also includes other types of storage tank facilities such as liquefied petroleum gas (LPG), vehicle tank meters (VTM), and compressed natural gas facilities.

## ***Environmental Records Definitions - STATE (CO)***

**CLEANERS** Dry Cleaning Facilities

VERSION DATE: 04/01/15

This database contains dry cleaners which have obtained an air permit through the Air Pollution Control Division at the Colorado Department of Public Health and Environment.

**UST** Underground Storage Tank Facilities

VERSION DATE: 04/20/15

The Oil and Public Safety Division of the Colorado Department of Labor and Employment maintains this list of underground storage tank facilities.

**HISTSWLF** Historical Solid Waste Landfills

VERSION DATE: NR

This historical solid waste landfills database contains data from the Hazardous Materials Waste Management Division (HMWMD) of the Colorado Department of Public Health and other various state and local agencies. In the early 1980s, the HMWMD conducted a survey of staff members and local agencies to compile this listing of sites that were known or thought to have waste issues. This Solid Waste Historical Data is not considered complete or verifiable and has not been maintained since the late 1980s. The HMWMD is not responsible and shall not be liable to the used for damages of any kind arising out of the use of this data or information.

**HWSTSD** Hazardous Waste Sites- Treatment, Storage & Disposal

VERSION DATE: 06/30/03

The Resource Conservation and Recovery Act (RCRA) was enacted by congress in 1976, followed by the promulgation of implementing regulations in 1980. In 1984, the State was authorized by EPA to implement the RCRA program in Colorado on their behalf. TSD facilities treat, store, dispose, or recycle hazardous waste on site in units and therefore are subject to RCRA permitting requirements. Historic TSDs are facilities that have completed closure and/or post-closure of the RCRA Subtitle C Regulated Unit(s) or the Treatment/Storage/Disposal Unit is no longer regulated. This database was provided by the Colorado Department of Public Health and Environment.

**LST** Leaking Storage Tank Facilities

VERSION DATE: 04/20/15

The Oil and Public Safety Division of the Colorado Department of Labor and Employment maintains this list of leaking aboveground and underground storage tank facilities.

**LUSTTRUST** Leaking Underground Storage Tanks Trust Fund Sites

VERSION DATE: 01/01/00

## **Environmental Records Definitions - STATE (CO)**

Suspected tank leaks have been discovered at the sites included in this database, but the facility responsible for the leak has not been identified. The state's investigation and search for responsible parties is paid for out of the state's Leaking Underground Storage Tank (LUST) Trust Fund. This database was provided by the Colorado Department of Labor & Employment, Division of Oil and Public Safety, State Fund Section and is no longer updated.

**METHANESITES** Methane Gas Study Sites

VERSION DATE: 01/01/81

This Investigation of Methane Gas Hazards report was prepared by the Denver Office of Emergency Preparedness in 1981. The purpose of this study was to assess the actual and potential generation, migration, explosive and related problems associated with specified landfills, and to identify existing and potential problems, suggested strategies to prevent, abate, and control such problems and recommend investigative and monitoring functions as may be deemed necessary. The Colorado Department of Health selected eight landfills as priorities due to population density and potential hazards to population and property.

**SWF** Solid Waste Facilities

VERSION DATE: 04/06/15

The Colorado Department of Public Health and Environment maintains this database of active solid waste disposal facilities, transfer stations, recyclers, waste tire registrants, and waste grease registrants.

**UMTS** Uranium Mill Tailings Sites

VERSION DATE: 08/09/02

There were nine uranium mill tailings sites in Colorado designated for cleanup under the federal Uranium Mill Tailings Radiation Control Act. These nine sites, know commonly as UMTRA sites, were remediated jointly by the State of Colorado and the U.S. Department of Energy during the late 1980's and early 1990's. Mill tailings were removed from 8 of the mill sites and relocated in engineered disposal cells. A disposal cell is designed to encapsulate the material, reduce radon emanation, and prevent the movement of water through the material. At one site, Maybell, CO, the tailings were stabilized in-place at the mill site. After remediation of the tailings was completed, the State and DOE began to investigate the residual impacts to groundwater at the mill sites. The groundwater phase of the UMTRA program is on-going. This database was provided by the Colorado Department of Public Health and Environment.

**VCRA** Voluntary Cleanup and Redevelopment Program Sites

VERSION DATE: 05/12/15

This site listing is provided by the Colorado Department of Public Health and Environment (CDPHE) and includes both voluntary cleanup and brownfield properties. The Voluntary Cleanup and Redevelopment program was created in 1994. The objective of the program is to facilitate the redevelopment and transfer of contaminated properties. Properties that sit untouched because of their real or perceived contamination can be rehabilitated

## **Environmental Records Definitions - STATE (CO)**

using the CDPHE's Brownfields Program in conjunction with the Voluntary Cleanup Program. Cleanup decisions are based on existing standards and the proposed use of the property. The actual cleanup and verification is the owner's responsibility.

**HWSCA** Hazardous Waste Sites- Corrective Action

VERSION DATE: 06/30/03

The Resource Conservation and Recovery Act (RCRA) was enacted by congress in 1976, followed by the promulgation of implementing regulations in 1980. In 1984, the Hazardous and Solid Waste Amendments (HSWA) were added to RCRA providing for corrective action at facilities subject to RCRA. That same year, the State was authorized by EPA to implement the RCRA program in Colorado on their behalf. Corrective action may be implemented as part of a RCRA Hazardous Waste Permit, an Order, or a Corrective Action Plan pursuant to the Colorado Hazardous Waste Regulations. Corrective action is the process by which regulated facilities investigate and remediate, as necessary, all contamination (soil, ground water, surface water, air) associated with their releases into the environment. Historic Corrective Action Sites are facilities that have completed the RCRA Subtitle C corrective Action process. This database was provided by the Colorado Department of Public Health and Environment.

**SF** Superfund Sites

VERSION DATE: 06/01/03

This listing contains active, deleted and proposed "Superfund" hazardous waste sites, as well as those sites identified through the Natural Resource Damages section of Superfund legislation and one Private Non-Superfund Cleanup site. A site qualifies for the National Priorities List (NPL or Superfund list) when the U.S. Environmental Protection Agency (EPA) determines there is a release or threatened release of hazardous substances that may endanger public health, welfare or the environment. In Colorado, the lead agency for Superfund remediation may be either the EPA or the Colorado Department of Public Health and Environment.

## ***Environmental Records Definitions - TRIBAL***

**USTR08**                      Underground Storage Tanks On Tribal Lands

VERSION DATE: 04/01/15

This database, provided by the United States Environmental Protection Agency (EPA), contains underground storage tanks on Tribal lands located in EPA Region 8. This region includes the following states: Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming.

**LUSTR08**                      Leaking Underground Storage Tanks On Tribal Lands

VERSION DATE: 04/01/15

This database, provided by the United States Environmental Protection Agency (EPA), contains leaking underground storage tanks on Tribal lands located in EPA Region 8. This region includes the following states: Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming.

**ODINDIAN**                      Open Dump Inventory on Tribal Lands

VERSION DATE: 11/08/06

This Indian Health Service database contains information about facilities and sites on tribal lands where solid waste is disposed of, which are not sanitary landfills or hazardous waste disposal facilities, and which meet the criteria promulgated under section 4004 of the Solid Waste Disposal Act (42 U.S.C. 6944).

**INDIANRES**                      Indian Reservations

VERSION DATE: 01/01/00

The Department of Interior and Bureau of Indian Affairs maintains this database that includes American Indian Reservations, off-reservation trust lands, public domain allotments, Alaska Native Regional Corporations and Recognized State Reservations.
