

Nursery Program Activities

Colorado Department of Agriculture

Division of Plant Industry

Fiscal Year July 1, 2003 – June 30, 2004

The Colorado Department of Agriculture conducts the nursery program as prescribed in the Colorado Nursery Act (C.R.S 35-26) and the associated rules and regulations.

The Goals of the Nursery Program are:

- 1) Assist in providing viable nursery stock free of pests and diseases to the general public.
- 2) Provide inspection and certification of nursery stock shipments to other states and foreign countries.
- 3) Prevent the spread of injurious insect pests, plant diseases, and noxious weeds within the state of Colorado.

Program Overview

The Nursery Program entails enforcement of the Colorado Nursery Act by registering and inspecting sellers of nursery stock statewide. Sellers are statutorily categorized as nurserymen, landscape contractors, sod producers and collectors with nurserymen being designated as nursery growers or nursery dealers for inspection purposes. Sellers are inspected at the most appropriate times of the year, depending on their category.

Registration

The Nursery Act requires that anyone selling nursery stock in the state must be registered with the Colorado Department of Agriculture. The definition of selling of nursery stock includes advertising with the intent to sell.

In addition to needing a nursery registration, collectors of nursery stock must produce upon demand, written evidence of authorization to have collected any and all nursery stock held or offered for sale. This is to prevent to theft of nursery stock from public and private lands.

The nursery registration fee is \$80. A nursery registration is valid from January 1 through December 31. If a registrant fails to renew their registration by March 1st, the Act requires that the fee for a registration is double or \$160.

Inspections

Premises in this state where nursery stock is kept for sale or offered for sale and all areas in this state that are sources of collected nursery stock may be inspected using a risk-based approach. In addition, if any person requests an inspection of crops, plant material, or other articles or premises for pests, the program will provide the inspection and issue a certificate setting forth the facts of the inspection.

Any nursery that only sells nursery stock that is grown within Colorado and does not export the stock outside of Colorado is exempt from the inspection requirements, except that the nursery may be inspected upon request if the required inspection fee is paid.

"Grown within Colorado" means propagated from seed or cuttings or by budding or grafting in Colorado, or grown as a native stand of trees or shrubs or other stock growing on property owned or leased in Colorado by the nursery who intends to collect and sell such stock.

No person shall sell nursery stock in the state except from sources available for inspection.

A charge for the actual cost incurred in making inspections is collected to defray the costs of inspections. The current fee is \$30 per hour with a one-hour minimum.

Nursery Dealer and Landscape Contractor Inspections

Nursery dealer inspections are performed, mainly in the spring, at locations where stock is held for sale. Statutorily nursery dealers are considered nurserymen but for inspection purposes they are separated. Dealers' stock is inspected for plant pests, viability of plants, adequate root systems, proper containers, correct labeling and proper handling and care. Cease and desist orders and stop-sale orders are issued when violations are found. Both consumers and sellers benefit from the program, which improves the image of the nursery industry in Colorado by being a regulated industry. Landscape contractors' stock is inspected only when they have a holding area, which most landscapers do not.

Nursery registrations were issued to 887 nursery dealers, including 43 collectors. Registrations issued to landscape contractors numbered 556. Details of inspections made and stop-sales issued are found in following tables that begin on the next page. The amount of stock inspected was just of 660,000 pieces. The percentage of stock inspected that was placed under stop-sale was 2.0%.

Nursery and Turfgrass Inspections

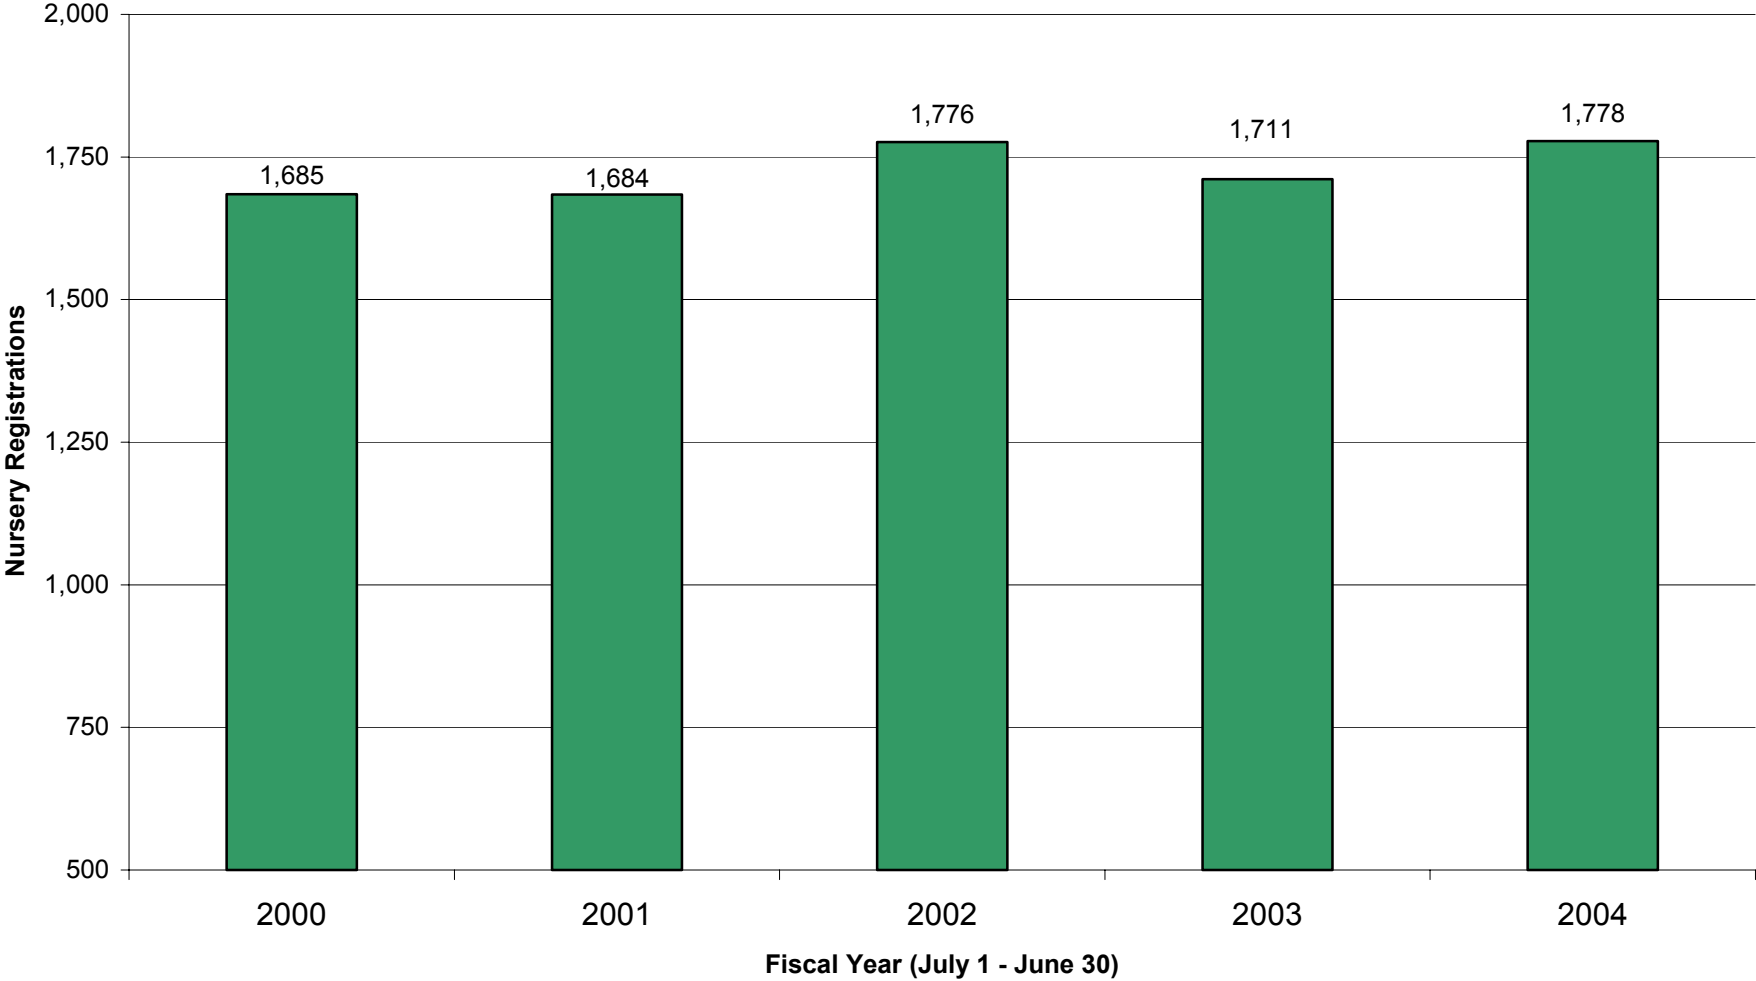

Inspections of nursery growing fields are made for insect and disease pests once a year. Turfgrass sod fields are inspected for insect and disease pests as well as certain weeds once each year. Inspection certificates are issued, and they facilitate shipment of nursery stock into other states.

Nursery registrations issued to growing nurseries totaled 232. Registered sod growers totaled 57. Nursery acreage inspected increased to 6,393 acres. Turfgrass acreage inspected was up significantly to 9,024 acres.

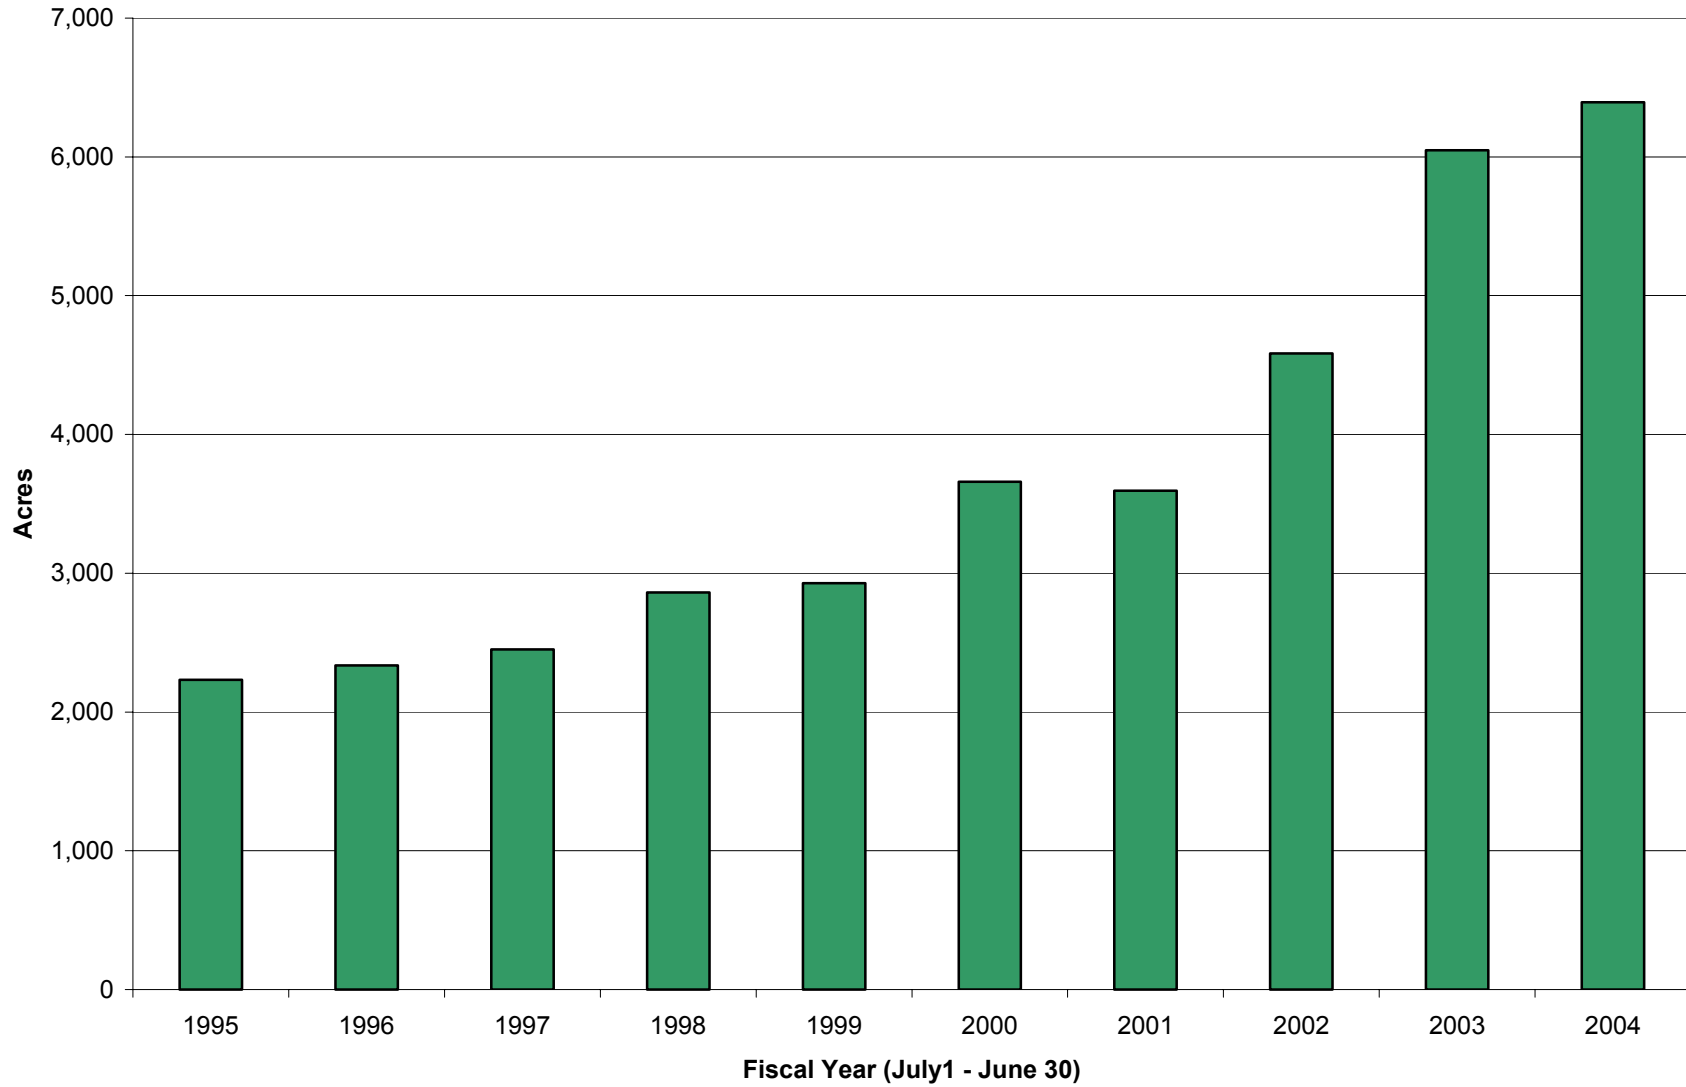

Long Term Trends

Nursery registrations have been on a slight increasing trend for the past fifteen years. Growing nursery acreage has increased dramatically in the past decade. While there has been a moderate increase in the number of growing nurseries the increase is more a result of the existing nurseries expanding

Annual Report of Inspection Results

The Nursery Act requires that on an annual basis, the results of nursery inspections shall be made public. This is done to inform the public as to the major sale sources of nursery stock found not to be of the quality permitted to be sold (stop - sale), and the location where such nursery stock was offered for sale.

On the next several pages are the nursery dealer inspection results for July 1, 2003 – June 30, 2004.

Legend

Inspected = numbers of pieces of nursery stock inspected at the business

E – Evergreens FT – Fruit Trees OT – Ornamental Trees R – Roses
S – Shrubs ST – Shade Trees T – Turf V – Vines

Total of Violations = number of pieces of stock placed under stop sale for various violations at that business

Stock Inspections for 07/01/2003 thru 06/30/2004
